#### 30.829.1.6 function `getNode ( o, po )`

Definition at line 384 of file `navtree.js`.

#### 30.829.1.7 function `getScript ( scriptName, func, show )`

Definition at line 72 of file `navtree.js`.

#### 30.829.1.8 function `glowEffect ( n, duration )`

Definition at line 281 of file `navtree.js`.

#### 30.829.1.9 function `gotoAnchor ( anchor, aname, updateLocation )`

Definition at line 129 of file `navtree.js`.

30.829.1.10 `function gotoNode ( o, subIndex, root, hash, relpath )`

Definition at line 397 of file `navtree.js`.

30.829.1.11 `function hashUrl ( )`

Definition at line 28 of file `navtree.js`.

30.829.1.12 `function hashValue ( )`

Definition at line 23 of file `navtree.js`.

30.829.1.13 `function highlightAnchor ( )`

Definition at line 288 of file `navtree.js`.

30.829.1.14 `function initNavTree ( toroot, relpath )`

Definition at line 466 of file `navtree.js`.

30.829.1.15 `function localStorageSupported ( )`

Definition at line 38 of file `navtree.js`.

30.829.1.16 `function navTo ( o, root, hash, relpath )`

Definition at line 412 of file `navtree.js`.

30.829.1.17 `function newNode ( o, po, text, link, childrenData, lastNode )`

Definition at line 157 of file `navtree.js`.

30.829.1.18 `function pathName ( )`

Definition at line 33 of file `navtree.js`.

30.829.1.19 `function removeToInsertLater ( element )`

Definition at line 371 of file `navtree.js`.

30.829.1.20 `function selectAndHighlight ( hash, n )`

Definition at line 307 of file navtree.js.

30.829.1.21 `function showNode ( o, node, index, hash )`

Definition at line 330 of file navtree.js.

30.829.1.22 `function showRoot ( )`

Definition at line 238 of file navtree.js.

30.829.1.23 `function showSyncOff ( n, relpath )`

Definition at line 442 of file navtree.js.

30.829.1.24 `function showSyncOn ( n, relpath )`

Definition at line 447 of file navtree.js.

30.829.1.25 `function storeLink ( link )`

Definition at line 49 of file navtree.js.

30.829.1.26 `function stripPath ( uri )`

Definition at line 10 of file navtree.js.

30.829.1.27 `function stripPath2 ( uri )`

Definition at line 15 of file navtree.js.

30.829.1.28 `function toggleSyncButton ( relpath )`

Definition at line 452 of file navtree.js.

## 30.829.2 Variable Documentation

30.829.2.1 `var animationInProgress = false`

Definition at line 127 of file navtree.js.

30.829.2.2 `var navTreeSubIndices = new Array()`

Definition at line 1 of file `navtree.js`.

## 30.1913 gotools-core/include/GoTools/geometry/Disc.h File Reference

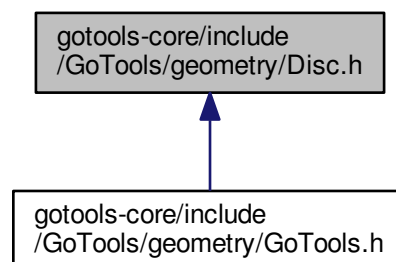

```
#include "GoTools/geometry/ElementarySurface.h"
```

```
#include "GoTools/geometry/Circle.h"
```

Include dependency graph for Disc.h:

This graph shows which files directly or indirectly include this file:

## Classes

- class [Go::Disc](#)

Class that represents a circular disc. It is a subclass of [ElementarySurface](#), and has a natural parametrization by polar coordinates in terms of a radius  $r$  and angle  $v$ :  $\mathbf{p}(r, v) = \mathbf{C} + r((\cos v) \mathbf{x} + (\sin v) \mathbf{y})$ , where  $\mathbf{C}$  is the centre position vector and  $\mathbf{x}$  and  $\mathbf{y}$  are the (local) axes. The parametrization is bounded by:  $0 \leq r \leq R$  and  $0 \leq v \leq 2\pi$ , where  $R$  is the disc radius. The dimension is 2 or 3.

#### 30.2153.1.1 ReturnMatrix Inverter ( `const CroutMatrix & X` )

Definition at line 13 of file `tmtd.cpp`.

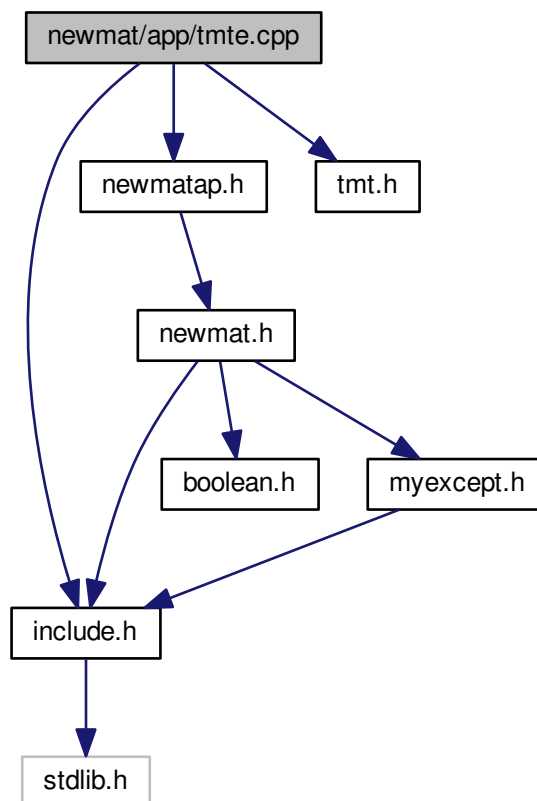

30.2153.1.2 void trymatd ( )

Definition at line 21 of file tmtd.cpp.

## 30.2154 newmat/app/tmte.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
```

Include dependency graph for tmte.cpp:

### Macros

- #define [WANT\\_MATH](#)

### Functions

- void [CheckIsSorted](#) (const [DiagonalMatrix](#) &D, bool ascending=false)
- void [trymate](#) ()

### 30.2154.1 Macro Definition Documentation

#### 30.2154.1.1 #define WANT\_MATH

Definition at line 3 of file tmt.cpp.

### 30.2154.2 Function Documentation

#### 30.2154.2.1 void CheckIsSorted ( const DiagonalMatrix & D, bool ascending = false )

Definition at line 17 of file tmt.cpp.

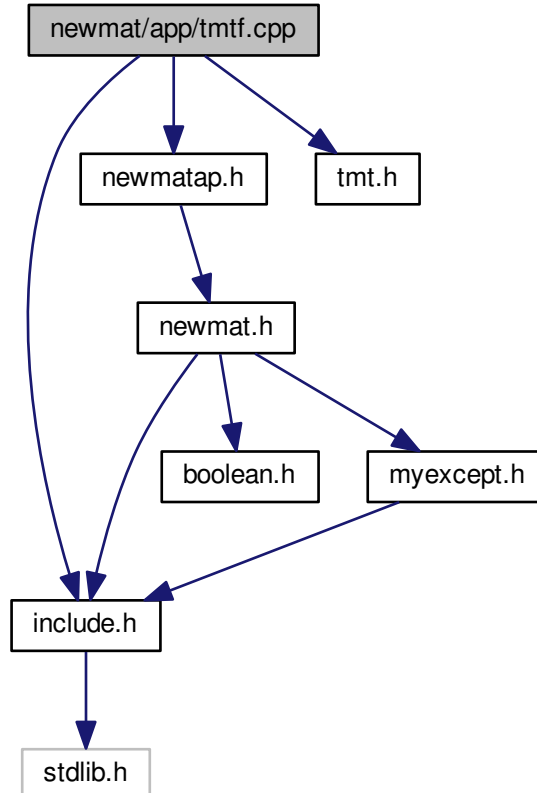

#### 30.2154.2.2 void trymate ( )

Definition at line 26 of file tmt.cpp.

## 30.2155 newmat/app/tmf.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
```

Include dependency graph for tmf.cpp:

## Macros

- #define [WANT\\_MATH](#)

## Functions

- void [trymatf](#) ()

### 30.2155.1 Macro Definition Documentation

#### 30.2155.1.1 #define WANT\_MATH

Definition at line 3 of file tmtf.cpp.

### 30.2155.2 Function Documentation

#### 30.2155.2.1 void trymatf ( )

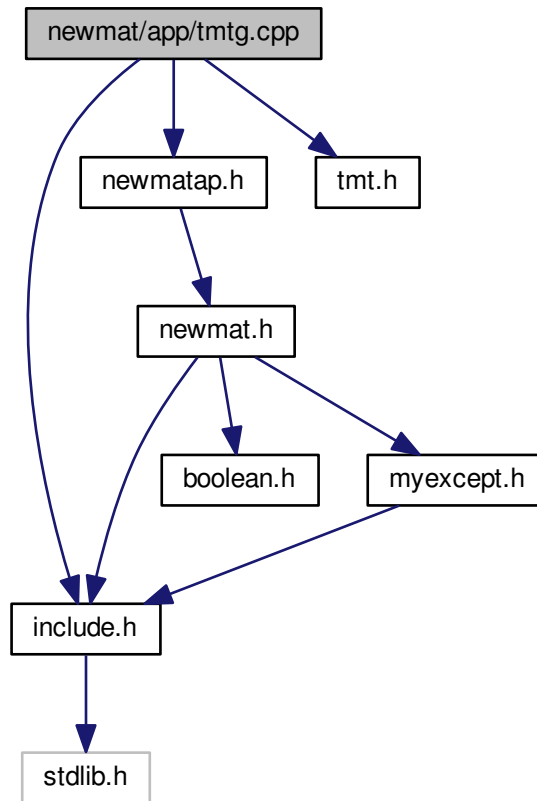

Definition at line 295 of file tmtf.cpp.

## 30.2156 newmat/app/tmtg.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
```

Include dependency graph for tmtg.cpp:

## Macros

- `#define` [WANT\\_MATH](#)

## Functions

- `void` [trymatg](#) ()

### 30.2156.1 Macro Definition Documentation

#### 30.2156.1.1 `#define` WANT\_MATH

Definition at line 4 of file `tmtg.cpp`.

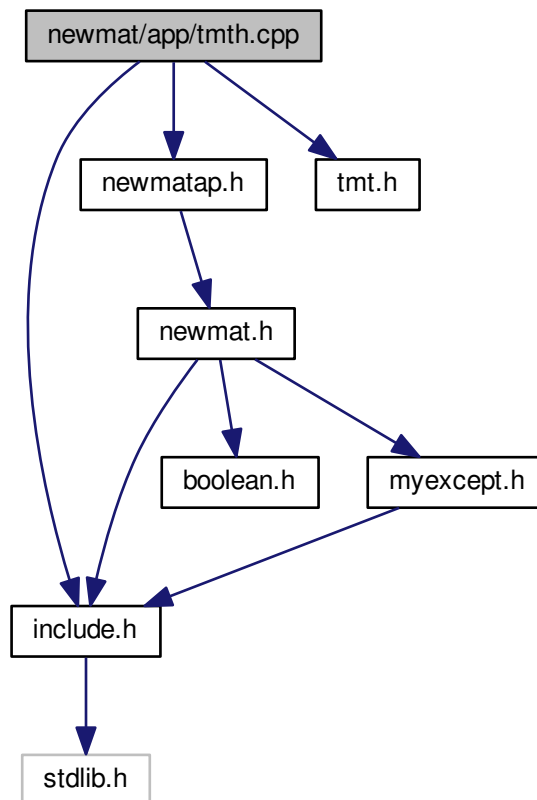

## 30.2156.2 Function Documentation

### 30.2156.2.1 void trymatg ( )

Definition at line 18 of file tmtg.cpp.

## 30.2157 newmat/app/tmth.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
Include dependency graph for tmth.cpp:
```

## Functions

- void [BandFunctions](#) (int l1, int u1, int l2, int u2)
- void [LowerBandFunctions](#) (int l1, int l2)
- void [UpperBandFunctions](#) (int u1, int u2)
- void [SymmetricBandFunctions](#) (int l1, int l2)
- void [trymath](#) ()

### 30.2157.1 Function Documentation

#### 30.2157.1.1 void BandFunctions ( int *l1*, int *u1*, int *l2*, int *u2* )

Definition at line 20 of file tmth.cpp.

#### 30.2157.1.2 void LowerBandFunctions ( int *l1*, int *l2* )

Definition at line 98 of file tmth.cpp.

#### 30.2157.1.3 void SymmetricBandFunctions ( int *l1*, int *l2* )

Definition at line 248 of file tmth.cpp.

#### 30.2157.1.4 void trymath ( )

Definition at line 365 of file tmth.cpp.

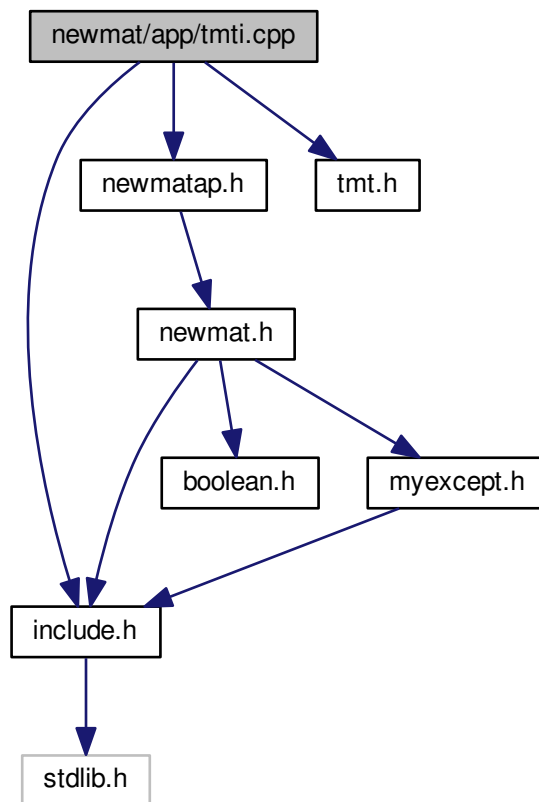

#### 30.2157.1.5 void UpperBandFunctions ( int *u1*, int *u2* )

Definition at line 173 of file tmth.cpp.

## 30.2158 newmat/app/tmti.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
```

Include dependency graph for tmti.cpp:

## Functions

- void [WillNotConverge](#) ()
- void [ReSizeMatrix](#) (Matrix &A)
- void [trymati](#) ()

### 30.2158.1 Function Documentation

#### 30.2158.1.1 void [ReSizeMatrix](#) ( Matrix & A )

Definition at line 22 of file `tmti.cpp`.

#### 30.2158.1.2 void [trymati](#) ( )

Definition at line 26 of file `tmti.cpp`.

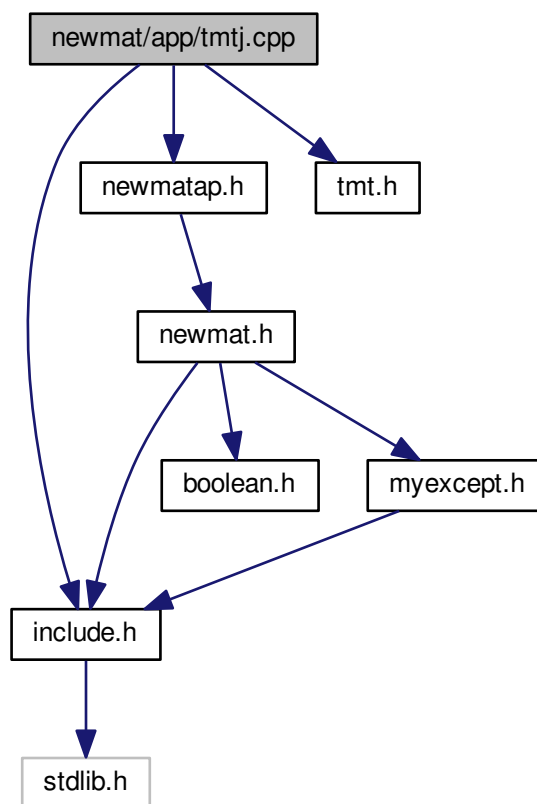

30.2158.1.3 void WillNotConverge ( )

Definition at line 16 of file tmti.cpp.

## 30.2159 newmat/app/tmtj.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "tmt.h"
```

Include dependency graph for tmtj.cpp:

### Functions

- void [trymatj](#) ( )

### 30.2159.1 Function Documentation

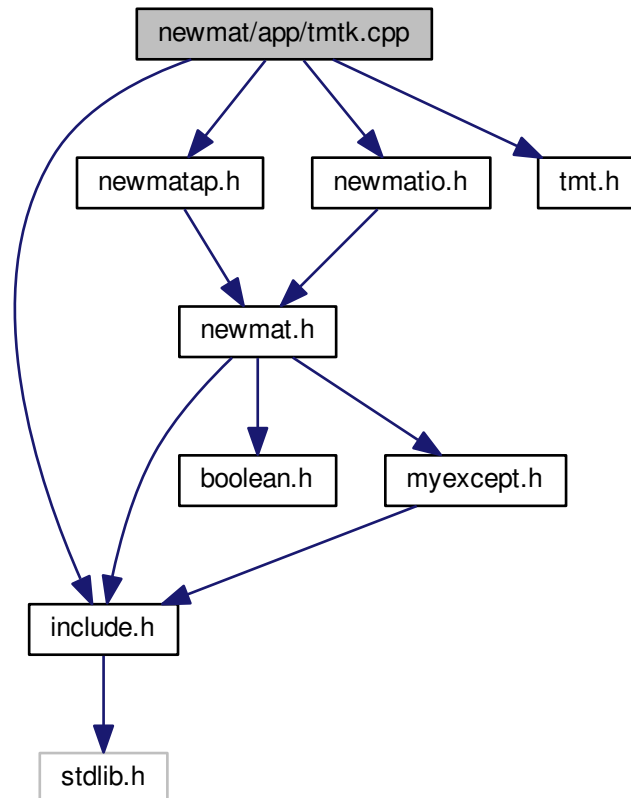

30.2159.1.1 void [trymatj](#) ( )

Definition at line 16 of file `tmtj.cpp`.

## 30.2160 newmat/app/tmtk.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "newmatio.h"
#include "tmt.h"
```

Include dependency graph for tmtk.cpp:

### Macros

- `#define WANT_STREAM`

### Functions

- `void trymatk ()`

### 30.2160.1 Macro Definition Documentation

#### 30.2160.1.1 `#define WANT_STREAM`

Definition at line 2 of file `tmtk.cpp`.

## 30.2160.2 Function Documentation

### 30.2160.2.1 void trymatk ( )

Definition at line 180 of file tmtk.cpp.

## 30.2161 newmat/app/tmtl.cpp File Reference

```
#include "newmat.h"
```

```
#include "tmt.h"
```

Include dependency graph for tmtl.cpp:

## Macros

- #define [WANT\\_STREAM](#)
- #define [WANT\\_MATH](#)

## Functions

- Real [TestMax](#) (`const GenericMatrix &GM`)
- void [trymatl](#) ( )

### 30.2161.1 Macro Definition Documentation

#### 30.2161.1.1 #define WANT\_MATH

Definition at line 4 of file tmtl.cpp.

#### 30.2161.1.2 #define WANT\_STREAM

Definition at line 2 of file tmtl.cpp.

### 30.2161.2 Function Documentation

#### 30.2161.2.1 Real TestMax ( const GenericMatrix & GM )

Definition at line 18 of file tmtl.cpp.

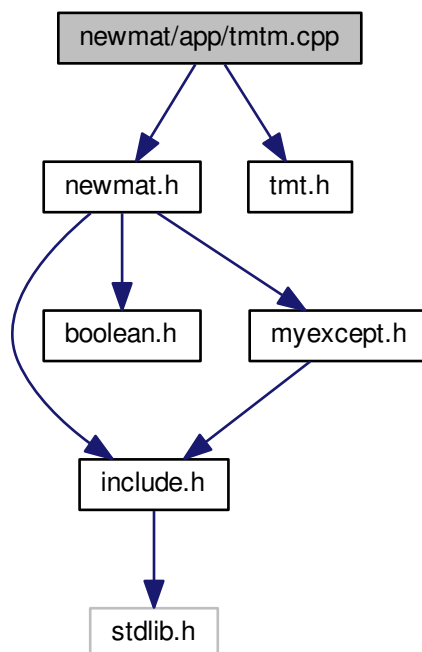

#### 30.2161.2.2 void trymatl ( )

Definition at line 132 of file tmtl.cpp.

## 30.2162 newmat/app/tmtm.cpp File Reference

```
#include "newmat.h"
#include "tmt.h"
```

Include dependency graph for tmtm.cpp:

## Macros

- #define [WANT\\_STREAM](#)
- #define [WANT\\_MATH](#)

## Functions

- void [trymatm](#) ()

### 30.2162.1 Macro Definition Documentation

#### 30.2162.1.1 #define WANT\_MATH

Definition at line 4 of file tmtm.cpp.

#### 30.2162.1.2 #define WANT\_STREAM

Definition at line 2 of file tmtm.cpp.

### 30.2162.2 Function Documentation

#### 30.2162.2.1 void trymatm ( )

Definition at line 19 of file tmtm.cpp.

## 30.2163 newmat/include/boolean.h File Reference

This graph shows which files directly or indirectly include this file:

## Classes

- class [bool](#)

## Macros

- #define [bool\\_LIB](#) 0

## Variables

- [const bool true](#) = 1
- [const bool false](#) = 0

### 30.2163.1 Macro Definition Documentation

#### 30.2163.1.1 #define bool\_LIB 0

Definition at line 6 of file boolean.h.

### 30.2163.2 Variable Documentation

#### 30.2163.2.1 const bool false = 0

Definition at line 26 of file boolean.h.

#### 30.2163.2.2 const bool true = 1

Definition at line 25 of file boolean.h.

## 30.2164 newmat/include/controlw.h File Reference

This graph shows which files directly or indirectly include this file:

## Classes

- class [ControlWord](#)

## Macros

- #define [CONTROL\\_WORD\\_LIB](#) 0

### 30.2164.1 Macro Definition Documentation

#### 30.2164.1.1 #define CONTROL\_WORD\_LIB 0

Definition at line 4 of file controlw.h.

## 30.2165 newmat/include/include.h File Reference

```
#include <stdlib.h>
```

Include dependency graph for include.h:

This graph shows which files directly or indirectly include this file:

### Namespaces

- [RBD\\_COMMON](#)
- [RBD\\_LIBRARIES](#)

### Macros

- `#define` [use\\_namespace](#)
- `#define` [UseExceptions](#)
- `#define` [USING\\_DOUBLE](#)
- `#define` [bool\\_LIB](#) 0
- `#define` [TypeDefException](#)
- `#define` [DEFAULT\\_HEADER](#)
- `#define` [ATandT](#)

### Typedefs

- `typedef` [double](#) [RBD\\_COMMON::Real](#)
- `typedef` [long](#) [double](#) [RBD\\_COMMON::long\\_Real](#)

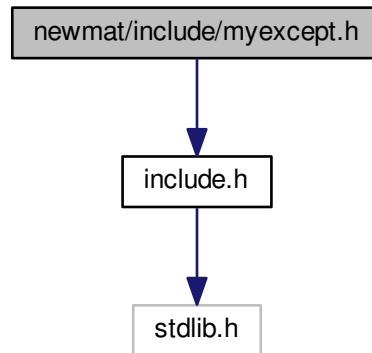

### 30.2165.1 Detailed Description

Set options and and details of include files.

## 30.2166 newmat/include/myexcept.h File Reference

```
#include "include.h"
```

Include dependency graph for myexcept.h:

This graph shows which files directly or indirectly include this file:

### Classes

- class [RBD\\_COMMON::Tracer](#)
- class [RBD\\_COMMON::BaseException](#)
- class [RBD\\_COMMON::Janitor](#)
- class [RBD\\_COMMON::Logic\\_error](#)
- class [RBD\\_COMMON::Runtime\\_error](#)
- class [RBD\\_COMMON::Domain\\_error](#)
- class [RBD\\_COMMON::Invalid\\_argument](#)
- class [RBD\\_COMMON::Length\\_error](#)
- class [RBD\\_COMMON::Out\\_of\\_range](#)
- class [RBD\\_COMMON::Range\\_error](#)
- class [RBD\\_COMMON::Overflow\\_error](#)
- class [RBD\\_COMMON::Bad\\_alloc](#)

### Namespaces

- [RBD\\_COMMON](#)

## Macros

- #define [Try](#) try
- #define [Throw](#)(E) throw E
- #define [ReThrow](#) throw
- #define [Catch](#) catch
- #define [CatchAll](#) catch(...)
- #define [CatchAndThrow](#) {}
- #define [FREE\\_CHECK](#)(Class) public:
- #define [MONITOR\\_REAL\\_NEW](#)(Operation, Size, Pointer) {}

- #define [PRECISION\\_LIB](#) 0
- #define [WANT\\_MATH](#)

### 30.2173.1 Detailed Description

Floating point precision constants.

### 30.2173.2 Macro Definition Documentation

#### 30.2173.2.1 `#define PRECISION_LIB 0`

Definition at line 8 of file `precisio.h`.

#### 30.2173.2.2 `#define WANT_MATH`

Definition at line 10 of file `precisio.h`.

## 30.2174 `newmat/include/solution.h` File Reference

```
#include "boolean.h"
#include "myexcept.h"
Include dependency graph for solution.h:
```

This graph shows which files directly or indirectly include this file:

### Classes

- class [RBD\\_COMMON::R1\\_R1](#)
- class [RBD\\_COMMON::SolutionException](#)
- class [RBD\\_COMMON::OneDimSolve](#)

### Namespaces

- [RBD\\_COMMON](#)

## 30.2175 newmat/include/tmt.h File Reference

This graph shows which files directly or indirectly include this file:

### Classes

- class [time\\_lapse](#)

### Functions

- void [Print](#) ([const Matrix](#) &X)
- void [Print](#) ([const UpperTriangularMatrix](#) &X)
- void [Print](#) ([const DiagonalMatrix](#) &X)
- void [Print](#) ([const SymmetricMatrix](#) &X)
- void [Print](#) ([const LowerTriangularMatrix](#) &X)
- void [Clean](#) ([Matrix](#) &, [Real](#))
- void [Clean](#) ([DiagonalMatrix](#) &, [Real](#))
- void [trymat1](#) ()
- void [trymat2](#) ()

- void [trymat3](#) ()
- void [trymat4](#) ()
- void [trymat5](#) ()

- void [trymatg](#) ()
- void [trymath](#) ()
- void [trymati](#) ()
- void [trymatj](#) ()
- void [trymatk](#) ()
- void [trymatl](#) ()
- void [trymatm](#) ()

### 30.2175.1 Function Documentation

#### 30.2175.1.1 void Clean ( Matrix & , Real )

Definition at line 121 of file tmt.cpp.

#### 30.2175.1.2 void Clean ( DiagonalMatrix & , Real )

Definition at line 131 of file tmt.cpp.

#### 30.2175.1.3 void Print ( const Matrix & X )

Definition at line 35 of file tmt.cpp.

#### 30.2175.1.4 void Print ( const UpperTriangularMatrix & X )

Definition at line 51 of file tmt.cpp.

#### 30.2175.1.5 void Print ( const DiagonalMatrix & X )

Definition at line 69 of file tmt.cpp.

#### 30.2175.1.6 void Print ( const SymmetricMatrix & X )

Definition at line 86 of file tmt.cpp.

30.2175.1.7 void Print ( const LowerTriangularMatrix & X )

Definition at line 104 of file tmt.cpp.

30.2175.1.8 void trymat1 ( )

Definition at line 20 of file tmt1.cpp.

30.2175.1.9 void trymat2 ( )

Definition at line 19 of file tmt2.cpp.

30.2175.1.10 void trymat3 ( )

Definition at line 17 of file tmt3.cpp.

30.2175.1.11 void trymat4 ( )

Definition at line 19 of file tmt4.cpp.

30.2175.1.12 void trymat5 ( )

Definition at line 43 of file tmt5.cpp.

30.2175.1.13 void trymat6 ( )

Definition at line 60 of file tmt6.cpp.

30.2175.1.14 void trymat7 ( )

Definition at line 18 of file tmt7.cpp.

30.2175.1.15 void trymat8 ( )

Definition at line 35 of file tmt8.cpp.

30.2175.1.16 void trymat9 ( )

Definition at line 16 of file tmt9.cpp.

30.2175.1.17 void trymata ( )

Definition at line 32 of file tmta.cpp.

30.2175.1.18 void trymatb ( )

Definition at line 43 of file tmtb.cpp.

30.2175.1.19 void trymatc ( )

Definition at line 17 of file tmtc.cpp.

30.2175.1.20 void trymatd ( )

Definition at line 21 of file tmtd.cpp.

30.2175.1.21 void trymate ( )

Definition at line 26 of file tmte.cpp.

30.2175.1.22 void trymatf ( )

Definition at line 295 of file tmtf.cpp.

30.2175.1.23 void trymatg ( )

Definition at line 18 of file tmtg.cpp.

30.2175.1.24 void trymath ( )

Definition at line 365 of file tmth.cpp.

30.2175.1.25 void trymati ( )

Definition at line 26 of file tmti.cpp.

30.2175.1.26 void trymatj ( )

Definition at line 16 of file tmtj.cpp.

30.2175.1.27 void trymatk ( )

Definition at line 180 of file tmtk.cpp.

30.2175.1.28 void trymatl ( )

Definition at line 132 of file tmtl.cpp.

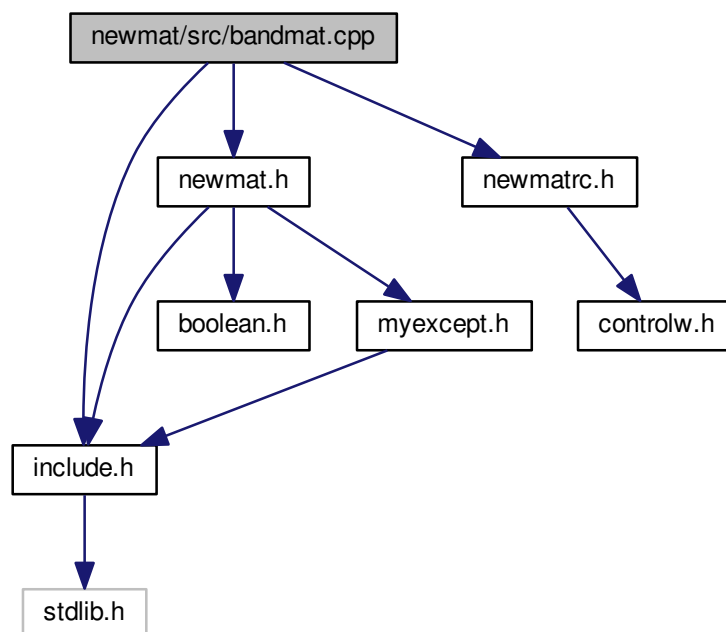

30.2175.1.29 void trymatm ( )

Definition at line 19 of file tmtm.cpp.

## 30.2176 newmat/src/bandmat.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for bandmat.cpp:

### Macros

- #define `WANT_MATH`
- #define `REPORT {}`

## Functions

- Real [square](#) (Real x)

### 30.2176.1 Macro Definition Documentation

#### 30.2176.1.1 `#define REPORT {}`

Definition at line 23 of file bandmat.cpp.

#### 30.2176.1.2 `#define WANT_MATH`

Definition at line 5 of file bandmat.cpp.

### 30.2176.2 Function Documentation

#### 30.2176.2.1 `Real square ( Real x )` `[inline]`

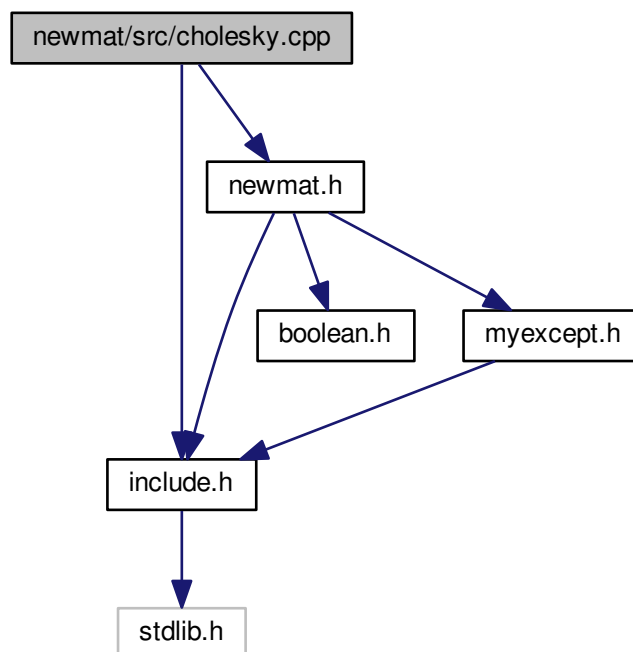

Definition at line 532 of file bandmat.cpp.

## 30.2177 newmat/src/cholesky.cpp File Reference

```
#include "include.h"
```

```
#include "newmat.h"
```

Include dependency graph for cholesky.cpp:

## Macros

- #define [WANT\\_MATH](#)
- #define [REPORT](#) {}

## Functions

- Real [square](#) (Real x)
- [ReturnMatrix Cholesky](#) (const SymmetricMatrix &S)
- [ReturnMatrix Cholesky](#) (const SymmetricBandMatrix &S)

### 30.2177.1 Macro Definition Documentation

#### 30.2177.1.1 #define REPORT {}

Definition at line 19 of file cholesky.cpp.

#### 30.2177.1.2 #define WANT\_MATH

Definition at line 5 of file cholesky.cpp.

### 30.2177.2 Function Documentation

#### 30.2177.2.1 ReturnMatrix Cholesky ( const SymmetricMatrix & S )

Definition at line 29 of file cholesky.cpp.

#### 30.2177.2.2 ReturnMatrix Cholesky ( const SymmetricBandMatrix & S )

Definition at line 54 of file cholesky.cpp.

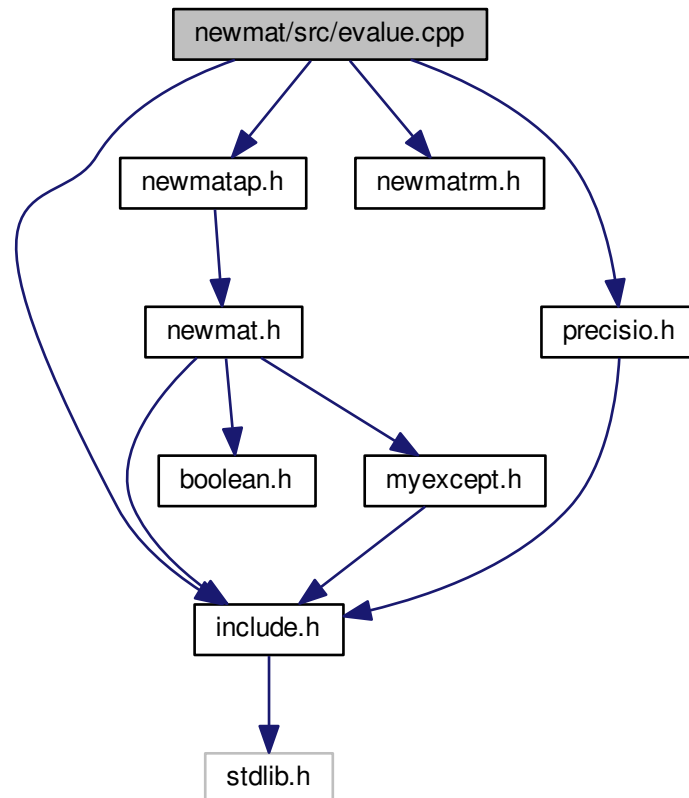

#### 30.2177.2.3 Real square ( Real x ) [inline]

Definition at line 27 of file cholesky.cpp.

## 30.2178 newmat/src/evalvalue.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
#include "newmatrm.h"
#include "precisio.h"
```

Include dependency graph for evalvalue.cpp:

### Macros

- `#define WANT_MATH`
- `#define REPORT {}`

### Functions

- void `EigenValues` (`const` SymmetricMatrix &A, DiagonalMatrix &D, Matrix &Z)
- void `EigenValues` (`const` SymmetricMatrix &X, DiagonalMatrix &D)
- void `EigenValues` (`const` SymmetricMatrix &X, DiagonalMatrix &D, SymmetricMatrix &A)

### 30.2178.1 Macro Definition Documentation

#### 30.2178.1.1 #define REPORT {}

Definition at line 19 of file evaluate.cpp.

#### 30.2178.1.2 #define WANT\_MATH

Definition at line 5 of file evaluate.cpp.

### 30.2178.2 Function Documentation

#### 30.2178.2.1 void EigenValues ( const SymmetricMatrix & A, DiagonalMatrix & D, Matrix & Z )

Definition at line 283 of file evaluate.cpp.

#### 30.2178.2.2 void EigenValues ( const SymmetricMatrix & X, DiagonalMatrix & D )

Definition at line 286 of file evaluate.cpp.

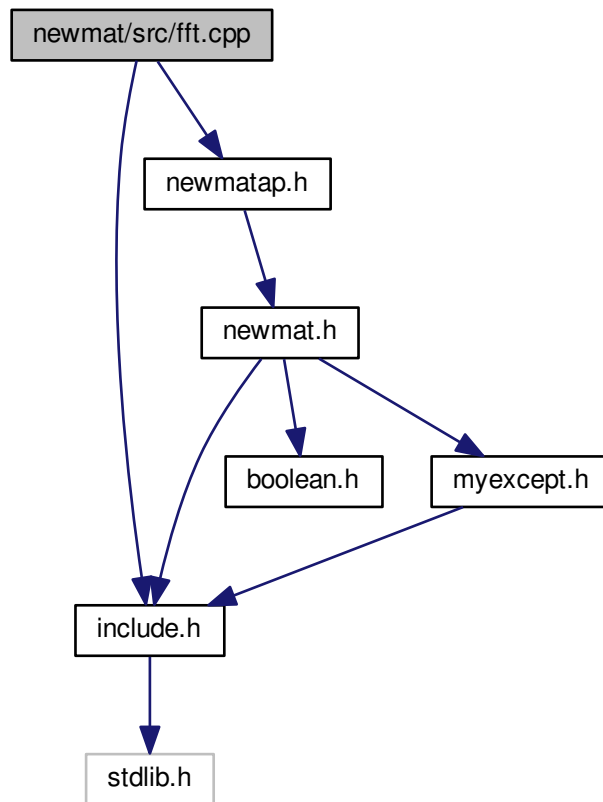

#### 30.2178.2.3 void EigenValues ( const SymmetricMatrix & X, DiagonalMatrix & D, SymmetricMatrix & A )

Definition at line 289 of file evaluate.cpp.

### 30.2179 newmat/src/fft.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
```

Include dependency graph for fft.cpp:

## Macros

- `#define WANT_MATH`
- `#define REPORT {}`

## Functions

- void `FFTI` (`const` ColumnVector &U, `const` ColumnVector &V, ColumnVector &X, ColumnVector &Y)
- void `RealFFT` (`const` ColumnVector &U, ColumnVector &X, ColumnVector &Y)
- void `RealFFTI` (`const` ColumnVector &A, `const` ColumnVector &B, ColumnVector &U)
- void `FFT` (`const` ColumnVector &U, `const` ColumnVector &V, ColumnVector &X, ColumnVector &Y)
- void `DCT_II` (`const` ColumnVector &U, ColumnVector &V)
- void `DCT_II_inverse` (`const` ColumnVector &V, ColumnVector &U)
- void `DST_II` (`const` ColumnVector &U, ColumnVector &V)
- void `DST_II_inverse` (`const` ColumnVector &V, ColumnVector &U)
- void `DCT_inverse` (`const` ColumnVector &V, ColumnVector &U)
- void `DCT` (`const` ColumnVector &U, ColumnVector &V)
- void `DST_inverse` (`const` ColumnVector &V, ColumnVector &U)
- void `DST` (`const` ColumnVector &U, ColumnVector &V)

## 30.2179.1 Macro Definition Documentation

### 30.2179.1.1 #define REPORT {}

Definition at line 22 of file fft.cpp.

### 30.2179.1.2 #define WANT\_MATH

Definition at line 6 of file fft.cpp.

## 30.2179.2 Function Documentation

### 30.2179.2.1 void DCT ( const ColumnVector & *U*, ColumnVector & *V* )

Definition at line 398 of file fft.cpp.

### 30.2179.2.2 void DCT\_II ( const ColumnVector & *U*, ColumnVector & *V* )

Definition at line 254 of file fft.cpp.

### 30.2179.2.3 void DCT\_II\_inverse ( const ColumnVector & *V*, ColumnVector & *U* )

Definition at line 282 of file fft.cpp.

### 30.2179.2.4 void DCT\_inverse ( const ColumnVector & *V*, ColumnVector & *U* )

Definition at line 364 of file fft.cpp.

### 30.2179.2.5 void DST ( const ColumnVector & *U*, ColumnVector & *V* )

Definition at line 435 of file fft.cpp.

### 30.2179.2.6 void DST\_II ( const ColumnVector & *U*, ColumnVector & *V* )

Definition at line 309 of file fft.cpp.

### 30.2179.2.7 void DST\_II\_inverse ( const ColumnVector & *V*, ColumnVector & *U* )

Definition at line 337 of file fft.cpp.

30.2179.2.8 void DST\_inverse ( const ColumnVector & V, ColumnVector & U )

Definition at line 407 of file fft.cpp.

30.2179.2.9 void FFT ( const ColumnVector & U, const ColumnVector & V, ColumnVector & X, ColumnVector & Y )

Definition at line 196 of file fft.cpp.

30.2179.2.10 void FFTI ( const ColumnVector & U, const ColumnVector & V, ColumnVector & X, ColumnVector & Y )

Definition at line 115 of file fft.cpp.

30.2179.2.11 void RealFFT ( const ColumnVector & U, ColumnVector & X, ColumnVector & Y )

Definition at line 125 of file fft.cpp.

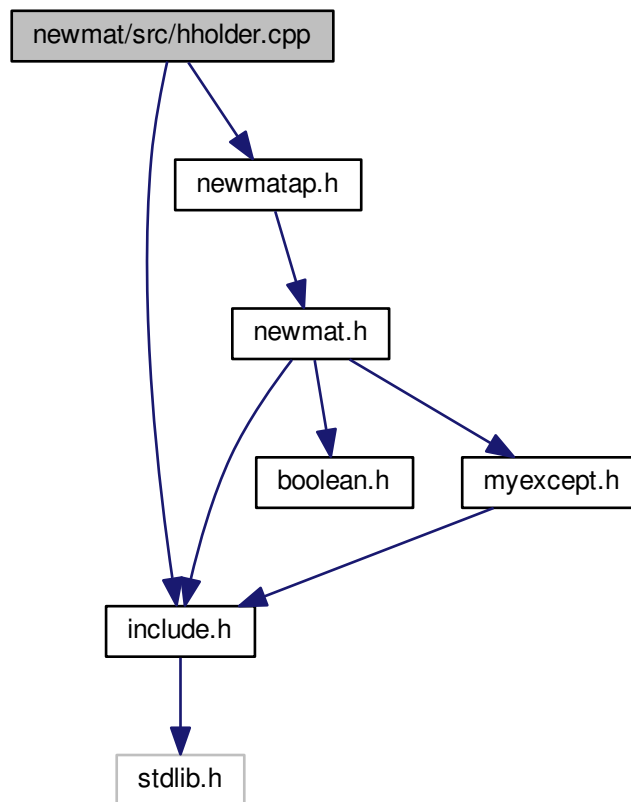

30.2179.2.12 void RealFFTI ( const ColumnVector & A, const ColumnVector & B, ColumnVector & U )

Definition at line 161 of file fft.cpp.

## 30.2180 newmat/src/hholder.cpp File Reference

```
#include "include.h"
#include "newmatap.h"
```

Include dependency graph for hholder.cpp:

## Macros

- `#define WANT_MATH`
- `#define REPORT {}`

## Functions

- Real `square` (Real `x`)
- void `QRZT` (Matrix &`X`, LowerTriangularMatrix &`L`)
- void `QRZT` (`const` Matrix &`X`, Matrix &`Y`, Matrix &`M`)
- void `QRZ` (Matrix &`X`, UpperTriangularMatrix &`U`)
- void `QRZ` (`const` Matrix &`X`, Matrix &`Y`, Matrix &`M`)

### 30.2180.1 Macro Definition Documentation

#### 30.2180.1.1 `#define REPORT {}`

Definition at line 18 of file `hholder.cpp`.

30.2180.1.2 `#define WANT_MATH`

Definition at line 5 of file `holder.cpp`.

## 30.2180.2 Function Documentation

30.2180.2.1 `void QRZ ( Matrix & X, UpperTriangularMatrix & U )`

Definition at line 101 of file `holder.cpp`.

30.2180.2.2 `void QRZ ( const Matrix & X, Matrix & Y, Matrix & M )`

Definition at line 136 of file `holder.cpp`.

30.2180.2.3 `void QRZT ( Matrix & X, LowerTriangularMatrix & L )`

Definition at line 26 of file `holder.cpp`.

30.2180.2.4 `void QRZT ( const Matrix & X, Matrix & Y, Matrix & M )`

Definition at line 50 of file `holder.cpp`.

30.2180.2.5 `Real square ( Real x ) [inline]`

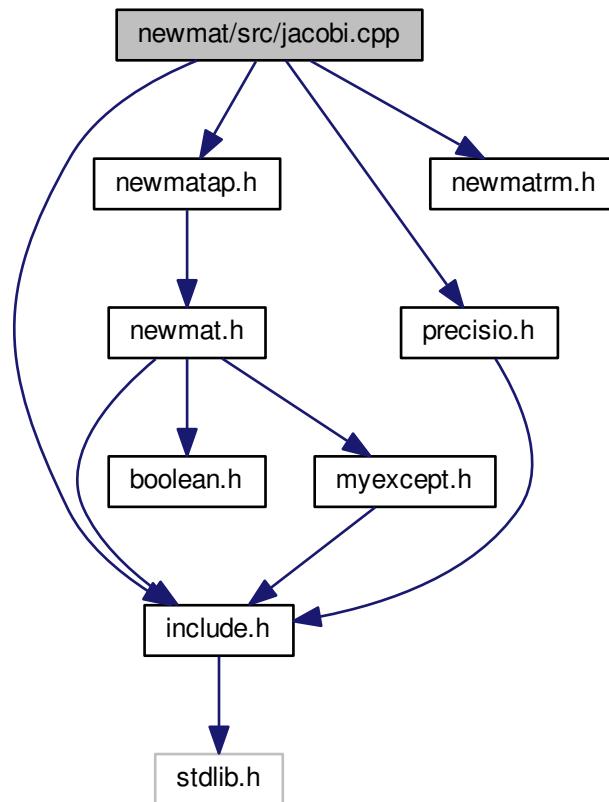

Definition at line 24 of file `holder.cpp`.

## 30.2181 `newmat/src/jacobi.cpp` File Reference

```
#include "include.h"
#include "newmatap.h"
#include "precisio.h"
#include "newmatrm.h"
```

Include dependency graph for jacobi.cpp:

## Macros

- `#define WANT_MATH`
- `#define REPORT {}`

## Functions

- void `Jacobi` (`const` SymmetricMatrix &X, DiagonalMatrix &D, SymmetricMatrix &A, Matrix &V, `bool` eivec)
- void `Jacobi` (`const` SymmetricMatrix &X, DiagonalMatrix &D)
- void `Jacobi` (`const` SymmetricMatrix &X, DiagonalMatrix &D, SymmetricMatrix &A)
- void `Jacobi` (`const` SymmetricMatrix &X, DiagonalMatrix &D, Matrix &V)

### 30.2181.1 Macro Definition Documentation

#### 30.2181.1.1 `#define REPORT {}`

Definition at line 23 of file `jacobi.cpp`.

30.2181.1.2 `#define WANT_MATH`

Definition at line 9 of file `jacobi.cpp`.

### 30.2181.2 Function Documentation

30.2181.2.1 `void Jacobi ( const SymmetricMatrix & X, DiagonalMatrix & D, SymmetricMatrix & A, Matrix & V, bool eivec )`

Definition at line 27 of file `jacobi.cpp`.

30.2181.2.2 `void Jacobi ( const SymmetricMatrix & X, DiagonalMatrix & D )`

Definition at line 110 of file `jacobi.cpp`.

30.2181.2.3 `void Jacobi ( const SymmetricMatrix & X, DiagonalMatrix & D, SymmetricMatrix & A )`

Definition at line 113 of file `jacobi.cpp`.

30.2181.2.4 `void Jacobi ( const SymmetricMatrix & X, DiagonalMatrix & D, Matrix & V )`

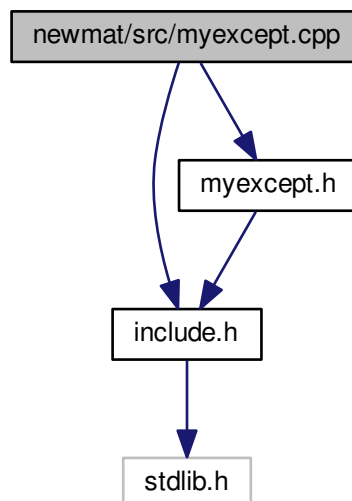

Definition at line 116 of file `jacobi.cpp`.

## 30.2182 `newmat/src/myexcept.cpp` File Reference

```
#include "include.h"
```

```
#include "myexcept.h"
```

Include dependency graph for `myexcept.cpp`:

- `#define WANT_STREAM`
- `#define WANT_STRING`
- `void Terminate ()`

### 30.2182.1 Detailed Description

Exception handler. The low level classes for

- my exception class hierarchy
- the functions needed for my simulated exceptions
- the Tracer mechanism
- routines for checking whether new and delete calls are balanced

### 30.2182.2 Macro Definition Documentation

#### 30.2182.2.1 #define WANT\_STREAM

Definition at line 16 of file myexcept.cpp.

#### 30.2182.2.2 #define WANT\_STRING

Definition at line 17 of file myexcept.cpp.

### 30.2182.3 Function Documentation

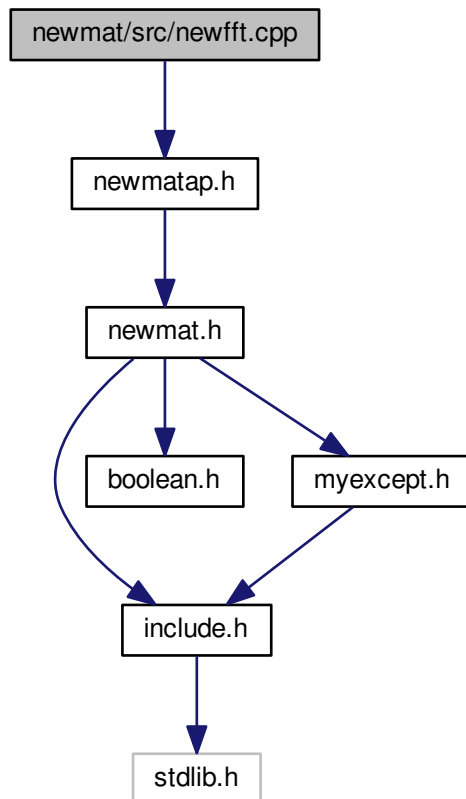

#### 30.2182.3.1 void Terminate ( )

Definition at line 226 of file myexcept.cpp.

## 30.2183 newmat/src/newfft.cpp File Reference

```
#include "newmatap.h"
```

Include dependency graph for newfft.cpp:

### Macros

- #define [WANT\\_STREAM](#)
- #define [WANT\\_MATH](#)
- #define [REPORT](#) {}

### Functions

- Real [square](#) (Real x)
- int [square](#) (int x)

### 30.2183.1 Macro Definition Documentation

#### 30.2183.1.1 #define [REPORT](#) {}

Definition at line 107 of file `newfft.cpp`.

30.2183.1.2 `#define WANT_MATH`

Definition at line 96 of file newfft.cpp.

30.2183.1.3 `#define WANT_STREAM`

Definition at line 94 of file newfft.cpp.

## 30.2183.2 Function Documentation

30.2183.2.1 `Real square ( Real x ) [inline]`

Definition at line 110 of file newfft.cpp.

30.2183.2.2 `int square ( int x ) [inline]`

Definition at line 111 of file newfft.cpp.

## 30.2184 newmat/src/newmat1.cpp File Reference

```
#include "newmat.h"
```

Include dependency graph for newmat1.cpp:

## Macros

- `#define REPORT {}`

## Functions

- `bool Rectangular (MatrixType a, MatrixType b, MatrixType c)`

### 30.2184.1 Macro Definition Documentation

#### 30.2184.1.1 `#define REPORT {}`

Definition at line 16 of file newmat1.cpp.

### 30.2184.2 Function Documentation

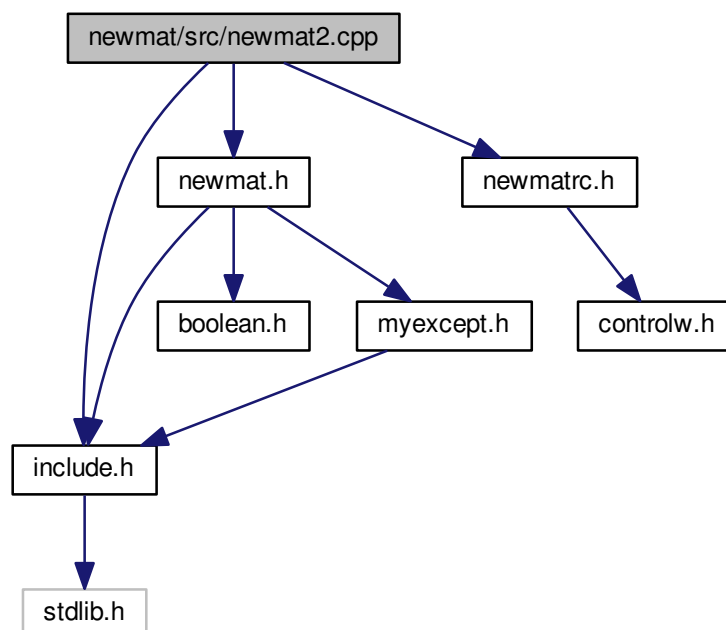

#### 30.2184.2.1 `bool Rectangular ( MatrixType a, MatrixType b, MatrixType c )`

Definition at line 88 of file newmat1.cpp.

## 30.2185 newmat/src/newmat2.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat2.cpp:

## Macros

- #define [WANT\\_MATH](#)
- #define [REPORT](#) {}
- #define [MONITOR](#)(*what*, *store*, *storage*) {}

## Functions

- Real [DotProd](#) ([const MatrixRowCol](#) &*mrc1*, [const MatrixRowCol](#) &*mrc2*)

### 30.2185.1 Macro Definition Documentation

#### 30.2185.1.1 #define [MONITOR](#)( *what*, *store*, *storage* ) {}

Definition at line 25 of file newmat2.cpp.

#### 30.2185.1.2 #define [REPORT](#) {}

Definition at line 20 of file newmat2.cpp.

#### 30.2185.1.3 #define [WANT\\_MATH](#)

Definition at line 5 of file newmat2.cpp.

### 30.2185.2 Function Documentation

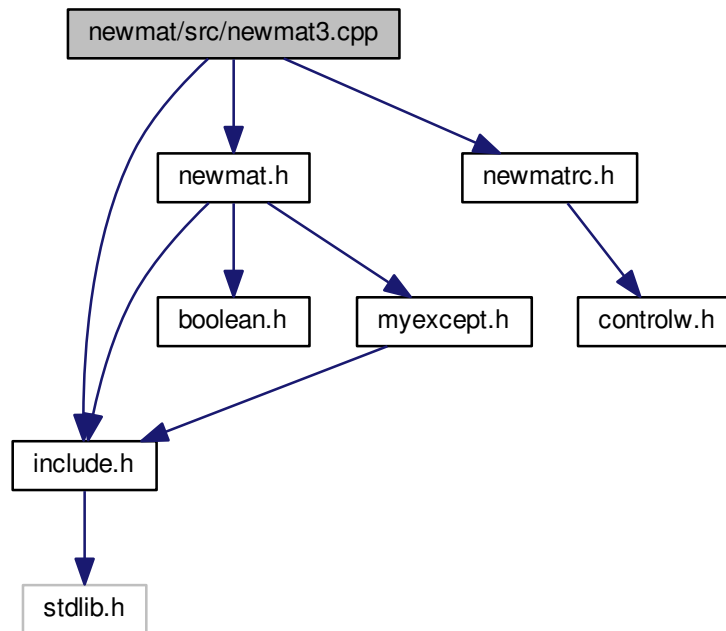

#### 30.2185.2.1 Real [DotProd](#) ( [const MatrixRowCol](#) & *mrc1*, [const MatrixRowCol](#) & *mrc2* )

Definition at line 73 of file newmat2.cpp.

## 30.2186 newmat/src/newmat3.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat3.cpp:

### Macros

- `#define REPORT {}`
- `#define MONITOR(what, store, storage) {}`

### 30.2186.1 Macro Definition Documentation

#### 30.2186.1.1 `#define MONITOR( what, store, storage ) {}`

Definition at line 26 of file `newmat3.cpp`.

#### 30.2186.1.2 `#define REPORT {}`

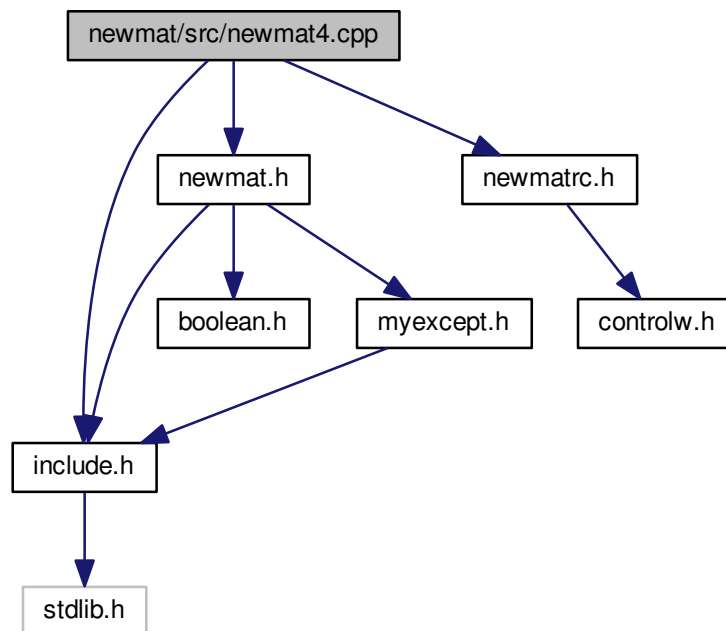

Definition at line 20 of file `newmat3.cpp`.

## 30.2187 newmat/src/newmat4.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat4.cpp:

### Macros

- `#define REPORT {}`
- `#define DO_SEARCH`

### Functions

- `bool Compare (const MatrixType &source, MatrixType &destination)`

#### 30.2187.1 Macro Definition Documentation

##### 30.2187.1.1 `#define DO_SEARCH`

Definition at line 23 of file newmat4.cpp.

30.2187.1.2 `#define REPORT {}`

Definition at line 19 of file newmat4.cpp.

## 30.2187.2 Function Documentation

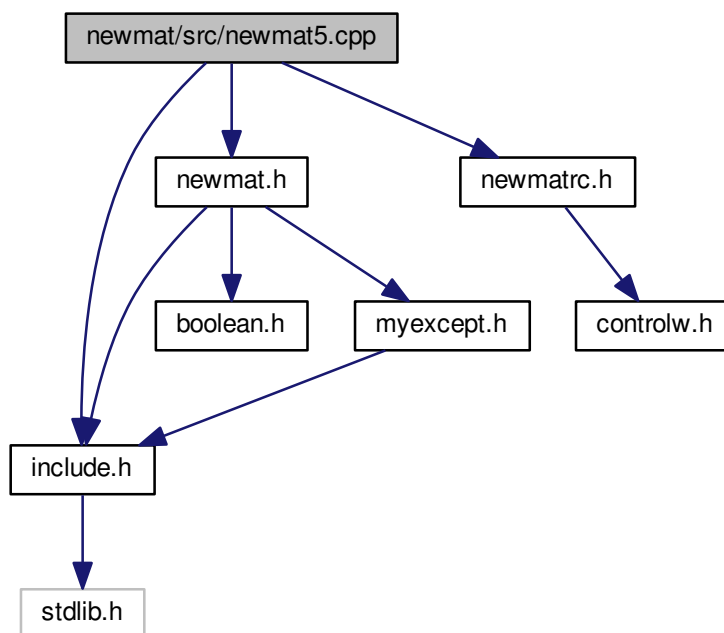

30.2187.2.1 `bool Compare ( const MatrixType & source, MatrixType & destination )`

Definition at line 681 of file newmat4.cpp.

## 30.2188 newmat/src/newmat5.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat5.cpp:

## Macros

- `#define REPORT {}`

### 30.2188.1 Macro Definition Documentation

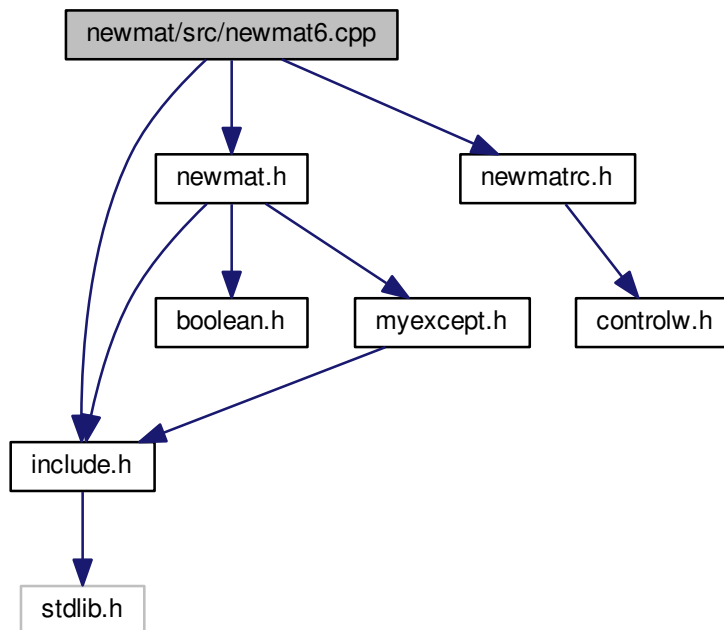

#### 30.2188.1.1 #define REPORT {}

Definition at line 20 of file newmat5.cpp.

### 30.2189 newmat/src/newmat6.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat6.cpp:

#### Macros

- #define [REPORT](#) {}

#### Functions

- SPMatrix [SP](#) ([const](#) BaseMatrix &bm1, [const](#) BaseMatrix &bm2)
- KPMatrix [KP](#) ([const](#) BaseMatrix &bm1, [const](#) BaseMatrix &bm2)
- NegShiftedMatrix [operator-](#) (Real f, [const](#) BaseMatrix &bm)

### 30.2189.1 Macro Definition Documentation

#### 30.2189.1.1 #define REPORT {}

Definition at line 19 of file newmat6.cpp.

### 30.2189.2 Function Documentation

#### 30.2189.2.1 KPMatrix KP ( const BaseMatrix & bm1, const BaseMatrix & bm2 )

Definition at line 451 of file newmat6.cpp.

#### 30.2189.2.2 NegShiftedMatrix operator- ( Real f, const BaseMatrix & bm )

Definition at line 472 of file newmat6.cpp.

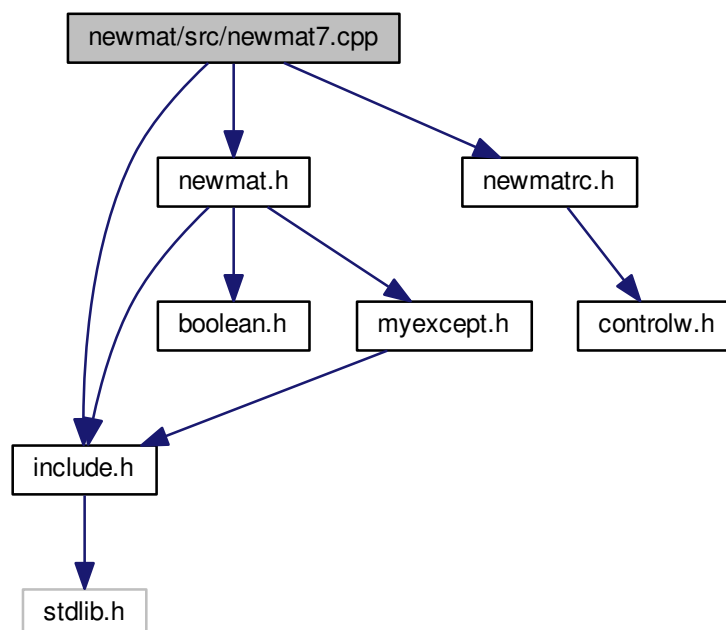

#### 30.2189.2.3 SPMatrix SP ( const BaseMatrix & bm1, const BaseMatrix & bm2 )

Definition at line 448 of file newmat6.cpp.

## 30.2190 newmat/src/newmat7.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
```

Include dependency graph for newmat7.cpp:

## Macros

- `#define REPORT {}`

## Functions

- `bool operator==(const BaseMatrix &A, const BaseMatrix &B)`
- `bool operator==(const GeneralMatrix &A, const GeneralMatrix &B)`
- `bool IsZero(const BaseMatrix &A)`

### 30.2190.1 Macro Definition Documentation

#### 30.2190.1.1 `#define REPORT {}`

Definition at line 18 of file newmat7.cpp.

### 30.2190.2 Function Documentation

#### 30.2190.2.1 `bool IsZero ( const BaseMatrix & A )`

Definition at line 982 of file newmat7.cpp.

#### 30.2190.2.2 `bool operator==( const BaseMatrix & A, const BaseMatrix & B )`

Definition at line 905 of file newmat7.cpp.

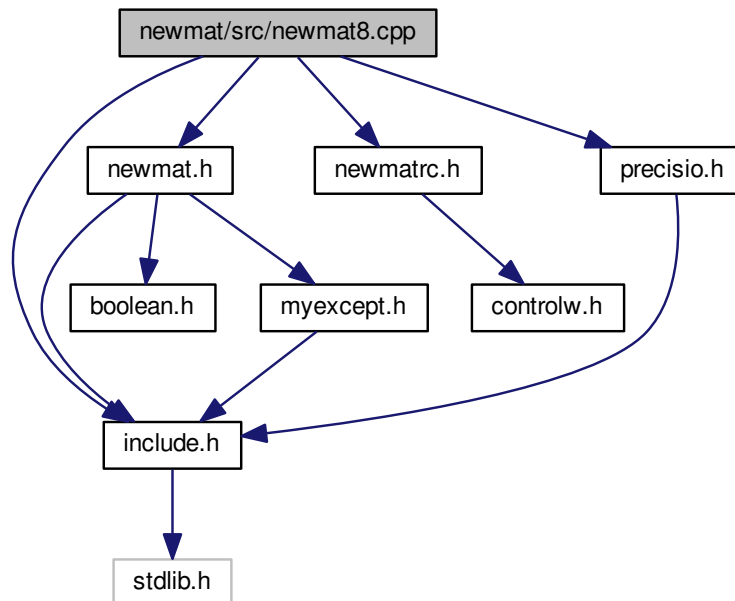

#### 30.2190.2.3 `bool operator==( const GeneralMatrix & A, const GeneralMatrix & B )`

Definition at line 943 of file newmat7.cpp.

## 30.2191 newmat/src/newmat8.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatrc.h"
#include "precisio.h"
```

Include dependency graph for newmat8.cpp:

### Macros

- `#define WANT_MATH`
- `#define REPORT {}`

### Functions

- Real `square` (Real x)
- Real `DotProduct` (const Matrix &A, const Matrix &B)

### 30.2191.1 Macro Definition Documentation

#### 30.2191.1.1 `#define REPORT {}`

Definition at line 21 of file `newmat8.cpp`.

30.2191.1.2 `#define WANT_MATH`

Definition at line 5 of file newmat8.cpp.

## 30.2191.2 Function Documentation

30.2191.2.1 `Real DotProduct ( const Matrix & A, const Matrix & B )`

Definition at line 524 of file newmat8.cpp.

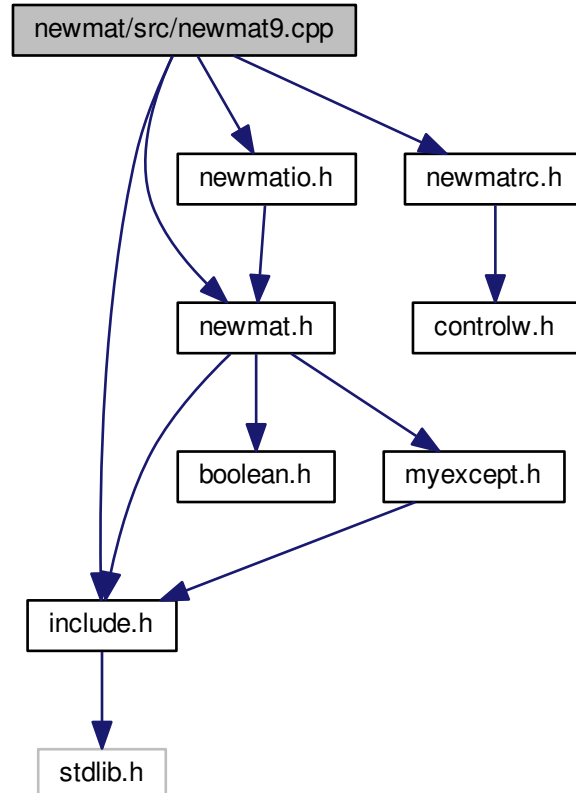

30.2191.2.2 `Real square ( Real x ) [inline]`

Definition at line 148 of file newmat8.cpp.

## 30.2192 newmat/src/newmat9.cpp File Reference

```
#include "include.h"
#include "newmat.h"
#include "newmatio.h"
#include "newmatrc.h"
```

Include dependency graph for newmat9.cpp:

## Macros

- #define `WANT_FSTREAM`
- #define `REPORT {}`
- #define `ios_format_flags` long

## Functions

- ostream & `operator<<` (ostream &s, const BaseMatrix &X)
- ostream & `operator<<` (ostream &s, const GeneralMatrix &X)

### 30.2192.1 Macro Definition Documentation

#### 30.2192.1.1 #define ios\_format\_flags long

Definition at line 28 of file newmat9.cpp.

#### 30.2192.1.2 #define REPORT {}

Definition at line 23 of file newmat9.cpp.

#### 30.2192.1.3 #define WANT\_FSTREAM

Definition at line 6 of file newmat9.cpp.

### 30.2192.2 Function Documentation

### 30.2209.1 Macro Definition Documentation

#### 30.2209.1.1 #define EPS 1e-8

Definition at line 67 of file PrGeodesics.h.

### 30.2209.2 Function Documentation

#### 30.2209.2.1 bool decreasing\_length ( const int nb\_steps, const vector< double > & lengths )

#### 30.2209.2.2 std::vector<int> DijkstraPT ( PrTriangulation\_OP & triangulation, int sce\_vertex, int dest\_vertex )

**Dijkstra** computes the shortest path between `sce_vertex` and `dest_vertex`, along the edges of the triangulation. It returns the polygonal solution path given by its vertices, vertices of the triangulation.

#### 30.2209.2.3 double dist2D ( Vector2D & a, Vector2D & b )

distance between two R2 points

#### 30.2209.2.4 double dist3D ( Vector3D & a, Vector3D & b )

distance between two R3 points

30.2209.2.5 `void GeodesicPT ( PrTriangulation_OP & triangulation, int sce_vertex, int dest_vertex, vector< Vector3D > & current_path, vector< int > & tr_seq3d )`

Computes a geodesic path (ie locally shortest path) between the vertices indexed by `sce_vertex` and `dest_vertex`. iterativ method consisting in :

1. Initialisation of a path with the [Dijkstra](#) method which computes a shortest path following the edges of the triangulation.
2. Improves locally the current path and associated sequence with an update of the sequence around pivot vertices, ie vertices where the path is not locally optimal. properties:
  - decreasing length at each step.
  - finite number of steps.

Returns the geodesic path as a polygonal line on the triangulated surface and the triangle sequence crossed by this path.

30.2209.2.6 `double length_polygonal_path ( const vector< Vector3D > & path )`

30.2209.2.7 `bool next_pivot ( std::list< int > & list_pivots, std::list< int >::iterator & iter_pivot, int prec_pivot )`

the treated pivot belongs to the boundary, consider the next one in the list.

30.2209.2.8 `bool pivot_in_new_list ( std::list< int > & list_pivots, std::vector< int >::const_iterator & tried_begin, std::vector< int >::const_iterator & tried_end, std::list< int >::iterator & iter_pivot )`

30.2209.2.9 `bool pivot_in_new_list ( std::list< int > & list_pivots, const std::list< int > & list_pivots_prec, int nb_steps, const vector< double > & lengths, std::list< int >::iterator & iter_pivot, int pivot )`

decide if there are pivot vertices in the new sequence set the pivot vertex where the sequence is to update in `iter_pivot`. compare the pivot lists before and after updating : if equal : incrementation of the pivot. if not : first pivot in the new list.

30.2209.2.10 `vector<Vector3D> point3D_from_indice ( PrTriangulation_OP & t, const vector< int > & ind_path )`

3D points from their indices in the triangulation

30.2209.2.11 `double sqr ( double x )`

30.2209.2.12 `vector<int> tr_crossed_by_path_vertices ( PrTriangulation_OP & t, vector< int > & vert_path )`

triangle sequence crossed by a path where the path is given by a list of vert. indices

30.2209.2.13 `std::list<int> tr_sequence_around_vertex ( PrTriangulation_OP & t, int vertex )`

triangles containing a vertex, ordered clockwise.

30.2209.2.14 `std::list<int> tr_sequence_around_vertex ( PrTriangulation_OP & t, int vertex, int first_tr )`

triangles containing a vertex, ordered clockwise, starting from `first_tr`.

30.2209.2.15 `bool update_triangle_sequence_around_pivot ( PrTriangulation_OP & t, vector< int > & tr_seq, int pivot )`

a triangle sequence is modified/updated around a given pivot vertex. returns

- 0 if it is not possible to update (if pivot belongs to the boundary or pivot does not belong to the sequence)
- 1 otherwise

### 30.2225.1 Function Documentation

30.2225.1.1 `double area ( const double & x0, const double & y0, const double & x1, const double & y1, const double & x2, const double & y2 )`

Find the signed area of triangle  $[(x_0,y_0),(x_1,y_1),(x_2,y_2)]$ , where  $(x_0,y_0),(x_1,y_1),(x_2,y_2)$  are assumed to be ordered anticlockwise.

30.2225.1.2 `double area ( const Vector3D & a, const Vector3D & b, const Vector3D & c )`

Find the positive area of a 3D triangle.

30.2225.1.3 `void baryCoords ( double x, double y, double x0, double y0, double x1, double y1, double x2, double y2, double & tau0, double & tau1, double & tau2 )`

Find the three barycentric coordinates of the point (x,y) with respect to the triangle with vertices (x0,y0), (x1,y1), (x2,y2). The three vertices should not be collinear!

30.2225.1.4 `void baryCoords0 ( double & u0, double & v0, double & u1, double & v1, double & u2, double & v2, double & tau0, double & tau1, double & tau2 )`

Find the barycentric coordinates of the origin (0,0) with respect to the triangle formed by three vectors (u0,v0),(u0,v1),(u0,v2). This is bit more efficient than calling baryCoords.

30.2225.1.5 `double cotangent ( const Vector3D & a, const Vector3D & b, const Vector3D & c )`

30.2225.1.6 `double det ( const double & u1, const double & v1, const double & u2, const double & v2 )`

30.2225.1.7 `void polarCoords ( Vector2D v, double & r, double & theta )`

Represent a vector v in polar coordinates  $r(\cos(\theta), \sin(\theta))$  where  $0 \leq r < 2\pi$ .

30.2225.1.8 `void polarCoords ( double u, double v, double & r, double & theta )`

Represent a vector (u,v) in polar coordinates  $r(\cos(\theta), \sin(\theta))$  where  $0 \leq r < 2\pi$ .

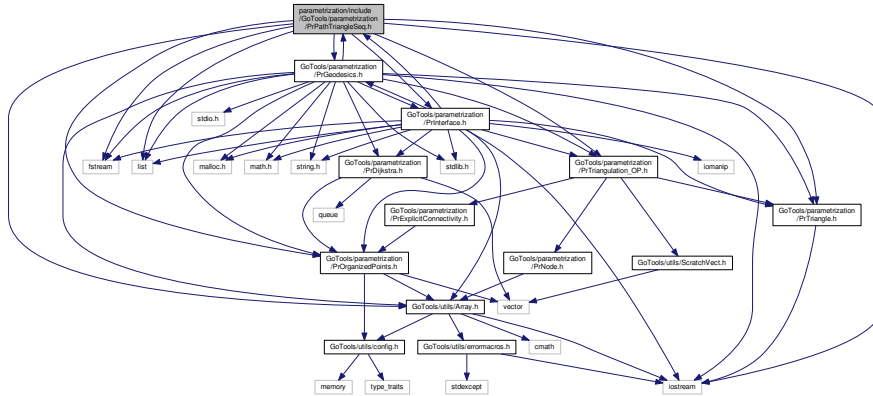

30.2225.1.9 `double tanThetaOverTwo ( const Vector3D & a, const Vector3D & b, const Vector3D & c )`

Return tangent of half the angle between vectors b-a and c-a without using trig functions. Use fact that  $\tan(\alpha/2) = (1 - \cos(\alpha)) / \sin(\alpha)$ . and use scalar and dot products to get  $\cos(\alpha)$  and  $\sin(\alpha)$ .

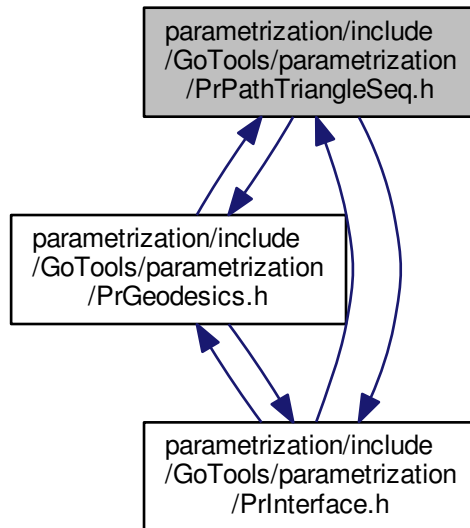

## 30.2226 parametrization/include/GoTools/parametrization/PrPathTriangleSeq.h File Reference

### 30.2226.1 Function Documentation

#### 30.2226.1.1 `double abs_val ( double a )`

absolute value

#### 30.2226.1.2 `double angle ( const Go::Vector2D & a, const Go::Vector2D & b, const Go::Vector2D & c, const Go::Vector2D & d )`

angle between two vectors AB and CD in the plane

#### 30.2226.1.3 `void axial_symmetry ( const Go::Vector2D c, const Go::Vector2D a, const Go::Vector2D b, Go::Vector2D & v )`

#### 30.2226.1.4 `EdgeType common_edge ( PrTriangle t1, PrTriangle t2 )`

common edge between two triangles, with the nodes given in the order of t1

#### 30.2226.1.5 `list<double> deviation_from_pivots ( const list< int > & list_pivots_unf, const vector< UnfNodeType > & nodes_unf )`

At each interior pivot, the path is deviated from the straight line. This function computes the deviation angles.

```
30.2226.1.6 std::vector<EdgeType> edge_sequence (const std::vector< int > & tr_seq, const PrTriangulation_OP
 & t)
```

given a triangle sequence, computes an edge sequence consisting of the common edges to two successive triangles in the sequence

```
30.2226.1.7 std::vector<EdgeType> edge_sequence (std::vector< PrTriangle > tr_seq)
```

given a triangle sequence, computes an edge sequence consisting of the common edges to two successive triangles in the sequence

```
30.2226.1.8 double length_polygonal_path (const list< int > & list_pivots_unf, vector< UnfNodeType > & nodes_unf)
```

```
30.2226.1.9 int line_intersection (Go::Vector2D a, Go::Vector2D b, Go::Vector2D c, Go::Vector2D d,
 Go::Vector2D & i)
```

computes i, the intersection between (ab) and (cd) returns 1 if there is a unique solution, 2 if the lines are the same, 0 if they are parallel

```
30.2226.1.10 Go::Vector3D local_coordinates (const Go::Vector3D a, const Go::Vector3D & U, const
 Go::Vector3D & V, const Go::Vector3D & W)
```

local coordinates of a vector A in an axis frame given by (U, V, W)

```
30.2226.1.11 void local_frame (Go::Vector3D a, Go::Vector3D b, Go::Vector3D c, Go::Vector3D & U,
 Go::Vector3D & V, Go::Vector3D & W)
```

local frame of triangle ABC

```
30.2226.1.12 void path_2Dpts_from_ratio_on_edge (const vector< UnfNodeType > & nodes_unf, vector< Vector2D > &
 path, const vector< double > & ratio_on_edge, const vector< EdgeType > & edge_seq2d)
```

Computes the 2D points of the path from their position (ratio) on the edges of the sequence

```
30.2226.1.13 void path_3Dpts_from_ratio_on_edge (const PrTriangulation_OP & t, std::vector< Go::Vector3D > &
 sh_path, const std::vector< double > & ratio_on_edge, const std::vector< EdgeType > & edge_seq3d)
```

Computes the 3D points of the path from their position (ratio) on the edges of the sequence.

```
30.2226.1.14 std::vector<double> path_ratio_on_edge_from_pivots (std::list< int > & list_pivots_unf, std::vector<
 EdgeType > & edge_seq_unf, const std::vector< UnfNodeType > & nodes_unf)
```

computes the intersection of the path, given by the pivots, with the edge sequence, returns the ratio/position on each edge

```
30.2226.1.15 void path_to_edge (const int sce_vertex_unf, int i, std::vector< PathType > & p, const std::vector<
 UnfNodeType > & nodes_unf, const std::vector< PrTriangle > & tr_seq_unf, std::vector< EdgeType >
 & edge_seq_unf)
```

Computes the path from a source point to an edge of the 2d sequence:. This path is given by:.

- a *l\_path\_*, polygonal chain of vertices to the left vertex of the edge.
- a *r\_path\_*, polygonal chain of vertices to the right vertex of the edge.
- *funnel\_*, common part of the path.

```
30.2226.1.16 list<int> pivots3D_from_pivots_in_unf_seq (const list< int > & list_pivots_unf, const vector<
 UnfNodeType > & nodes_unf)
```

computes the 3d pivot list corresponding to the pivot in the unfolded sequence. The pivots are the vertices of the shortest path. The pivots in the unfolded sequence contain all the vertices of the path (source and dest. too). The 3d pivots do not contain the source and dest. vertices.

```
30.2226.1.17 void print_deviation (std::list< double > & list_deviation)
```

```
30.2226.1.18 void print_edges_lengths (std::vector< PrTriangle > tr, std::vector< UnfNodeType > nodes_unf)
```

print the lengths of the edges of the triangles in the unfolded sequence

```
30.2226.1.19 void print_list_int (std::list< int > & list_pivots_unf)
```

```
30.2226.1.20 void print_tr_vertices (std::vector< int > & tr, PrTriangulation_OP & t)
```

```
30.2226.1.21 void print_triangle_sequence (std::vector< PrTriangle > tr, std::vector< UnfNodeType > nodes_unf)
```

```
30.2226.1.22 void printNode (vector< UnfNodeType > & v)
```

```
30.2226.1.23 void printUnfoldedObjects (std::ofstream & os, std::vector< UnfNodeType > & nodes_unf, std::vector<
 PrTriangle > & tr_seq_unf, std::list< int > & list_pivots_unf)
```

```
30.2226.1.24 void printUnfoldedPath (std::ofstream & os, std::vector< UnfNodeType > & nodes_unf, std::list< int > &
 list_pivots_unf)
```

```
30.2226.1.25 void printUnfoldedPath (std::ofstream & os, std::vector< Go::Vector2D > path)
```

```
30.2226.1.26 void printUnfoldedSequence (std::ofstream & os, std::vector< UnfNodeType > & nodes_unf, std::vector<
 PrTriangle > & tr_seq_unf)
```

```
30.2226.1.27 Vector2D pt2D_from_ratio_on_edge (double r, Vector2D a, Vector2D b)
```

Computes a 2D point from its position (ratio) on an edge.

30.2226.1.28 `Go::Vector3D pt3D_from_ratio_on_edge ( double r, Go::Vector3D A, Go::Vector3D B )`

Computes a 3D point from its position (ratio) on an edge.

30.2226.1.29 `void rotation2D ( const Go::Vector2D a, const double theta, const Go::Vector2D c, Go::Vector2D & vect )`

30.2226.1.30 `int same_side ( const Go::Vector2D pt1, const Go::Vector2D pt2, const Go::Vector2D ptA, const Go::Vector2D ptB )`

check if pt1 and pt2 are both on the same side of [ptA ptB]

30.2226.1.31 `double segment_intersection ( Go::Vector2D a, Go::Vector2D b, Go::Vector2D c, Go::Vector2D d )`

intersection between [ab] and [cd]. returns the position of the intersection on the oriented segment [cd] given by a ratio

30.2226.1.32 `vector<Vector3D> shortest_path_triangle_sequence ( const PrTriangulation_OP & t, int sce_vertex, int dest_vertex, const vector< int > & tr_seq3d, list< int > & list_pivots, double & length )`

input: triangulation and triangle sequence. output:

- shortest path in that sequence = polygonal line given by its 3D vertices.
- list of pivot vertices, ie vertices of the triangulation belonging to this shortest path.
- length of this shortest path.

30.2226.1.33 `void shortest_path_triangle_sequence ( const PrTriangulation_OP & t, const int & sce_vertex, const int & dest_vertex, vector< int > & tr_seq3d, list< int > & list_pivots, std::vector< EdgeType > & edge_seq3d, std::vector< double > & ratio_on_edge, double & length )`

input: triangulation and triangle sequence. output:

- shortest path in that sequence = polygonal line given by its 3D vertices.
- list of pivot vertices, ie vertices of the triangulation. belonging to this shortest path.
- length of this shortest path.

30.2226.1.34 `vector<double> shortest_path_triangle_sequence_2D ( const PrTriangulation_OP & t, const int sce_vertex, const int dest_vertex, const int sce_vertexUnf, int dest_vertexUnf, const std::vector< int > & tr_seq3d, std::vector< PrTriangle > & tr_seq_unf, std::list< int > & list_pivots_unf, std::vector< UnfNodeType > nodes_unf, double & length )`

computes the shortest path in an ordered 2d sequence of triangles, corresponding to a 3d sequence that was unfolded

30.2226.1.35 `int third_vertex ( PrTriangle Tr, EdgeType e )`

third vertex of triangle *t* not belonging to edge *e*

30.2226.1.36 `void unfolding_first_triangle ( const PrTriangulation_OP & t, const vector< int > & tr_seq, vector< PrTriangle > & tr_seq_unf, vector< UnfNodeType > & nodes_unf )`

first triangle unfolded with 1st vertex = (0,0), 2nd on the x-axis, 3rd in the  $y > 0$  half plane

30.2226.1.37 `void unfolding_triangle_sequence ( const PrTriangulation_OP & t, const vector< int > & tr_seq3d, vector< PrTriangle > & tr_seq_unf, const vector< EdgeType > & edge_seq3d, vector< EdgeType > & edge_seq_unf, vector< UnfNodeType > & nodes_unf )`

unfolding of a sequence of triangle 3D from a triangulation. returns a set of unfolded nodes, a sequence of unfolded triangles and a sequence of unfolded edges

30.2226.1.38 `void unfolding_vertex ( const PrTriangulation_OP & t, const vector< int > & tr_seq3d, vector< PrTriangle > & tr_seq_unf, const int vertex, int & vertex_unf )`

associates the unfolded node to a vertex of the sequence (for example for the source and destination vertices)

30.2226.1.39 `double vect_prod2D ( Go::Vector2D a, Go::Vector2D b, Go::Vector2D c, Go::Vector2D d )`

30.2226.1.40 `Go::Vector3D vector_U ( const Go::Vector3D W )`

first axis/vector in the current triangle plane for the local frame

30.2226.1.41 `Go::Vector3D vector_V ( const Go::Vector3D W, const Go::Vector3D U )`

second axis/vector in the current triangle plane for the local frame

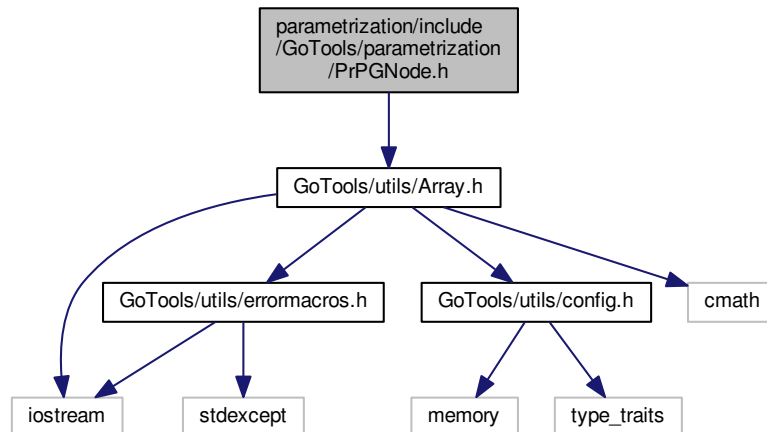

30.2226.1.42 `Go::Vector3D vector_W ( Go::Vector3D a, Go::Vector3D b, Go::Vector3D c )`

axis and normal vector in the current triangle plane for the local frame

## 30.2283 sisl/examples/viewer/src/aux2.cpp File Reference

```
#include <stdio.h>
#include <math.h>
#include <vector>
#include <strings.h>
#include <unistd.h>
#include <time.h>
```

Include dependency graph for `aux2.cpp`:

### Functions

- void `tic` (void)
- void `toc` (void)

### Variables

- double `jon_timer`

### 30.2283.1 Function Documentation

#### 30.2283.1.1 void tic ( void )

Definition at line 100 of file aux2.cpp.

#### 30.2283.1.2 void toc ( void )

Definition at line 106 of file aux2.cpp.

### 30.2283.2 Variable Documentation

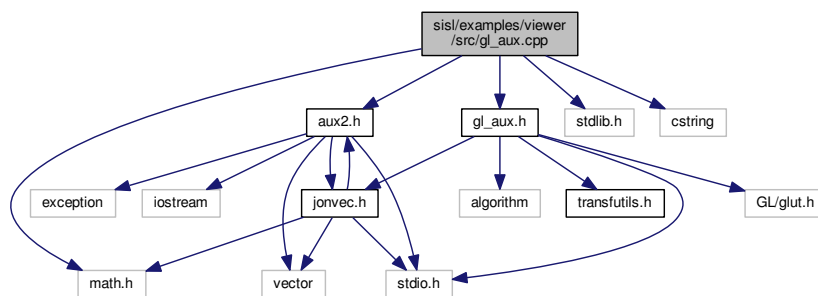

#### 30.2283.2.1 double jon\_timer

Definition at line 70 of file aux2.cpp.

## 30.2284 sisl/examples/viewer/src/gl\_aux.cpp File Reference

```
#include <math.h>
#include <stdlib.h>
#include <cstring>
#include "aux2.h"
#include "gl_aux.h"
```

Include dependency graph for gl\_aux.cpp:

### Macros

- #define PI 3.1415926536

## Functions

- void `draw_cylinder` (double *x0*, double *y0*, double *z0*, double *x1*, double *y1*, double *z1*, double *radius*, double *radius2*, int *n*)  
*Draw a cylinder, or possibly a cone.*

- void `reshape_window` (int *width*, int *height*)
- void `write_gl_matrices` (FILE \**f*)
- void `read_gl_matrices` (FILE \**f*)

## Variables

- const int `predefined_colours` =24
- const double `predef_col_table` [3 \*`predefined_colours`]

### 30.2284.1 Macro Definition Documentation

30.2284.1.1 `#define PI 3.1415926536`

Definition at line 50 of file `gl_aux.cpp`.

### 30.2284.2 Function Documentation

30.2284.2.1 void `draw_cylinder` ( double *x0*, double *y0*, double *z0*, double *x1*, double *y1*, double *z1*, double *radius*, double *radius2*, int *n* )

Draw a cylinder, or possibly a cone.

Definition at line 91 of file `gl_aux.cpp`.

30.2284.2.2 void `draw_gl_axes_old` ( int *n*, double *r*, double *radius*, double *rim*, double *l* )

Definition at line 174 of file `gl_aux.cpp`.

30.2284.2.3 void `draw_grid` ( const int *n1*, const int *n2*, const int *n3* )

Definition at line 223 of file `gl_aux.cpp`.

30.2284.2.4 void draw\_grid\_planes ( const int *n1*, const int *n2*, const int *n3* )

Definition at line 273 of file gl\_aux.cpp.

30.2284.2.5 void gl\_init ( int *argc*, char \* *argv*[], const int *xs*, const int *ys*, const int *x0*, const int *y0*, const int *doubleBuffer*, const int *two\_sided*, const int *lighting*, const int *normalize*, const int *smooth*, const double *xtrans*, const double *ytrans*, const double *ztrans*, const double *xscale*, const double *yscale*, const double *zscale*, int & *tx*, int & *ty*, const int *texture\_mode*, const char \*const *texture\_file* )

Definition at line 329 of file gl\_aux.cpp.

30.2284.2.6 void print\_gl\_matrix ( const int *m* )

Definition at line 659 of file gl\_aux.cpp.

30.2284.2.7 void read\_gl\_matrices ( FILE \* *f* )

Definition at line 781 of file gl\_aux.cpp.

30.2284.2.8 void reshape\_window ( int *width*, int *height* )

Definition at line 741 of file gl\_aux.cpp.

30.2284.2.9 void transpose\_matrix ( double \*const *d* )

Definition at line 641 of file gl\_aux.cpp.

30.2284.2.10 void write\_gl\_matrices ( FILE \* *f* )

Definition at line 761 of file gl\_aux.cpp.

### 30.2284.3 Variable Documentation

30.2284.3.1 const double predef\_col\_table[3 \*predefined\_colours]

Definition at line 84 of file mouse.cpp.

30.2286.3.4 float curz =0.0

Definition at line 84 of file mouse.cpp.

30.2286.3.5 int last\_x =0

Definition at line 70 of file mouse.cpp.

30.2286.3.6 int last\_x0 =0

Definition at line 70 of file mouse.cpp.

30.2286.3.7 int last\_y =0

Definition at line 70 of file mouse.cpp.

30.2286.3.8 `int last_y0 =0`

Definition at line 70 of file mouse.cpp.

30.2286.3.9 `bool mouse_movement =false`

Definition at line 71 of file mouse.cpp.

## 30.2287 sisl/examples/viewer/src/sisl\_aux.cpp File Reference

```
#include <stdio.h>
#include <ctype.h>
#include <stdlib.h>
#include "sisl_aux.h"
#include "aux2.h"
```

Include dependency graph for sisl\_aux.cpp:

### Macros

- `#define DBGqqq`

### Functions

- void `lower_degree_to_linear` (SISLSurf \*\*srf, double e)
- void `lower_degree_and_subdivide` (SISLSurf \*\*srf, int new\_knots\_per\_interval, int max\_number\_of\_knots)
- void `compute_surface_normals` (SISLSurf \*srf, double \*\*ngrid)

### 30.2287.1 Macro Definition Documentation

30.2287.1.1 `#define DBGqqq`

Definition at line 40 of file sisl\_aux.cpp.

## 30.2287.2 Function Documentation

30.2287.2.1 void `compute_surface_normals` ( `SISLSurf * srf`, `double ** ngrid` )

Definition at line 231 of file `sisl_aux.cpp`.

30.2287.2.2 void `lower_degree_and_subdivide` ( `SISLSurf ** srf`, `int new_knots_per_interval`, `int max_number_of_knots` )

Definition at line 81 of file `sisl_aux.cpp`.

30.2287.2.3 void `lower_degree_to_linear` ( `SISLSurf ** srf`, `double e` )

Definition at line 62 of file `sisl_aux.cpp`.

## 30.2288 sisl/examples/viewer/src/transfutils.cpp File Reference

```
#include <GL/glut.h>
#include <stdio.h>
#include "transfutils.h"
```

Include dependency graph for `transfutils.cpp`:

## Functions

- void `rotate` (`double y_ang`, `double x_ang`, `double z_ang`)
- void `translate` (`double x`, `double y`, `double z`)
- void `scale` (`double x`, `double y`, `double z`)

## Variables

- `double xtrans =0.0`
- `double ytrans =0.0`
- `double ztrans =-6`
- `double xrot_eps =5.0`
- `double yrot_eps =5.0`
- `double zrot_eps =5.0`
- `double xscale =1.0`
- `double yscale =1.0`
- `double zscale =1.0`
- `double xrot`
- `double yrot`
- `double zrot`

### 30.2288.1 Function Documentation

30.2288.1.1 `void rotate ( double y_ang, double x_ang, double z_ang )`

Definition at line 68 of file `transfutils.cpp`.

30.2288.1.2 `void scale ( double x, double y, double z )`

Definition at line 127 of file `transfutils.cpp`.

30.2288.1.3 `void translate ( double x, double y, double z )`

Definition at line 108 of file `transfutils.cpp`.

### 30.2288.2 Variable Documentation

30.2288.2.1 `double xrot`

Definition at line 61 of file `transfutils.cpp`.

30.2288.2.2 `double xrot_eps =5.0`

Definition at line 59 of file `transfutils.cpp`.

30.2288.2.3 `double xscale =1.0` `[property]`, `[bound]`, `[constrained]`

Definition at line 60 of file `transfutils.cpp`.

**30.2288.2.4** `double xtrans =0.0` [property], [bound], [constrained]

Definition at line 58 of file transfutils.cpp.

**30.2288.2.5** `double yrot`

Definition at line 61 of file transfutils.cpp.

### 30.2290.1 Macro Definition Documentation

#### 30.2290.1.1 #define GO\_API

Definition at line 75 of file sisl.h.

#### 30.2290.1.2 #define SISL\_CRV\_CLOSED 0

Definition at line 263 of file sisl.h.

#### 30.2290.1.3 #define SISL\_CRV\_OPEN 1

Definition at line 262 of file sisl.h.

#### 30.2290.1.4 #define SISL\_CRV\_PERIODIC -1

Definition at line 261 of file sisl.h.

#### 30.2290.1.5 #define SISL\_SURF\_CLOSED 0

Definition at line 267 of file sisl.h.

#### 30.2290.1.6 #define SISL\_SURF\_OPEN 1

Definition at line 266 of file sisl.h.

#### 30.2290.1.7 #define SISL\_SURF\_PERIODIC -1

Definition at line 265 of file sisl.h.

## 30.2290.2 Typedef Documentation

30.2290.2.1 typedef struct SISLbox SISLbox

30.2290.2.2 typedef struct SISLCurve SISLCurve

30.2290.2.3 typedef struct SISLdir SISLdir

30.2290.2.4 typedef struct SISLIntcurve SISLIntcurve

30.2290.2.5 typedef struct SISLSurf SISLSurf

## 30.2290.3 Enumeration Type Documentation

30.2290.3.1 anonymous enum

Enumerator

***SI\_RIGHT***

***SI\_LEFT***

Definition at line 252 of file sisl.h.

30.2290.3.2 anonymous enum

Enumerator

***SI\_UNDEF***

***SI\_IN***

***SI\_OUT***

***SI\_ON***

***SI\_AT***

Definition at line 256 of file sisl.h.

### 30.2291.1 Macro Definition Documentation

#### 30.2291.1.1 `#define AEPSCO (double)0.0`

Definition at line 380 of file sisIP.h.

#### 30.2291.1.2 `#define AEPSTGE (double)1.e-6`

Definition at line 379 of file sisIP.h.

#### 30.2291.1.3 `#define ANGULAR_TOLERANCE (double)0.01 /* IN RADIANS */`

Definition at line 384 of file sisIP.h.

#### 30.2291.1.4 `#define CONST`

Definition at line 114 of file sisIP.h.

#### 30.2291.1.5 `#define CONSTVOIDP (char *)`

Definition at line 117 of file sisIP.h.

30.2291.1.6 `#define DZERO (double)0.0`

Definition at line 399 of file sislP.h.

30.2291.1.7 `#define MAXIMAL_RADIUS_OF_CURVATURE (double)10000.0`

Definition at line 385 of file sislP.h.

30.2291.1.8 `#define REL_COMP_RES (double)0.0000000000000001`

Definition at line 382 of file sislP.h.

30.2291.1.9 `#define REL_PAR_RES (double)0.000000000001`

Definition at line 383 of file sislP.h.

30.2291.1.10 `#define SISL_NULL 0`

Definition at line 393 of file sislP.h.

30.2291.1.11 `#define SISLCURVE 1`

Definition at line 375 of file sislP.h.

30.2291.1.12 `#define SISLPOINT 0`

Definition at line 374 of file sislP.h.

30.2291.1.13 `#define SISLSURFACE 2`

Definition at line 376 of file sislP.h.

30.2291.1.14 `#define VOIDP (char *)`

Definition at line 116 of file sislP.h.

## 30.2291.2 Typedef Documentation

30.2291.2.1 typedef struct rank\_info rank\_info

30.2291.2.2 typedef struct SISLEdge SISLEdge

## 30.2292.1 Macro Definition Documentation

### 30.2292.1.1 #define CONSTRUCT

Definition at line 49 of file construct.c.

## 30.2292.2 Function Documentation

### 30.2292.2.1 SISLCurve\* copyCurve ( SISLCurve \* pcurve )

Definition at line 1847 of file construct.c.

### 30.2292.2.2 SISLIntpt\* copyIntpt ( SISLIntpt \* ppt )

Definition at line 57 of file construct.c.

### 30.2292.2.3 SISLSurf\* copySurface ( SISLSurf \* psurf )

Definition at line 1982 of file construct.c.

### 30.2292.2.4 SISLIntpt\* hp\_copyIntpt ( SISLIntpt \* ppt )

Definition at line 118 of file construct.c.

### 30.2292.2.5 SISLIntpt\* hp\_newIntpt ( int ipar, double \* epar, double adist, int itype, int ileft1, int iright1, int ileft2, int iright2, int size\_1, int size\_2, double \* egeom1, double \* egeom2 )

Definition at line 1123 of file construct.c.

### 30.2292.2.6 SISLbox\* newbox ( int idim )

Definition at line 180 of file construct.c.

### 30.2292.2.7 SISLCurve\* newCurve ( int in, int ik, double \* et, double \* ecoef, int ikind, int idim, int icopy )

Definition at line 268 of file construct.c.

### 30.2292.2.8 SISLdir\* newdir ( int idim )

Definition at line 455 of file construct.c.

30.2292.2.9 **SISLEdge\*** newEdge ( int *iedge* )

Definition at line 509 of file construct.c.

30.2292.2.10 **SISLIntcurve\*** newIntcurve ( int *ipoint*, int *ipar1*, int *ipar2*, double \* *epar1*, double \* *epar2*, int *itype* )

Definition at line 589 of file construct.c.

30.2292.2.11 **SISLIntdat\*** newIntdat ( )

Definition at line 681 of file construct.c.

30.2292.2.12 **SISLIntlist\*** newList ( **SISLIntpt** \* *pfirst*, **SISLIntpt** \* *plast*, int *itype* )

Definition at line 753 of file construct.c.

30.2292.2.13 **SISLIntpt\*** newIntpt ( int *ipar*, double \* *epar*, double *adist* )

Definition at line 823 of file construct.c.

30.2292.2.14 **SISLIntsurf\*** newIntsurf ( **SISLIntlist** \* *pintlist* )

Definition at line 926 of file construct.c.

30.2292.2.15 **SISLObject\*** newObject ( int *iobj* )

Definition at line 1381 of file construct.c.

30.2292.2.16 **SISLPoint\*** newPoint ( double \* *ecoef*, int *idim*, int *icopy* )

Definition at line 1449 of file construct.c.

30.2292.2.17 **SISLPtedge\*** newPtedge ( **SISLIntpt** \* *ppt* )

Definition at line 1541 of file construct.c.

30.2292.2.18 **SISLSurf\*** newSurf ( int *in1*, int *in2*, int *ik1*, int *ik2*, double \* *et1*, double \* *et2*, double \* *ecoef*, int *ikind*, int *idim*, int *icopy* )

Definition at line 1607 of file construct.c.

30.2292.2.19 `SISLTrack* newTrack ( SISLSurf * psurf_1, SISLSurf * psurf_2, SISLCurve * pcurve_3d, SISLCurve * pcurve_2d_1, SISLCurve * pcurve_2d_2, int ideg, eimpli, int sing_start, int sing_end, int turned )`

Definition at line 1297 of file construct.c.

30.2292.2.20 `SISLTrimpar* newTrimpar ( int pt, int par )`

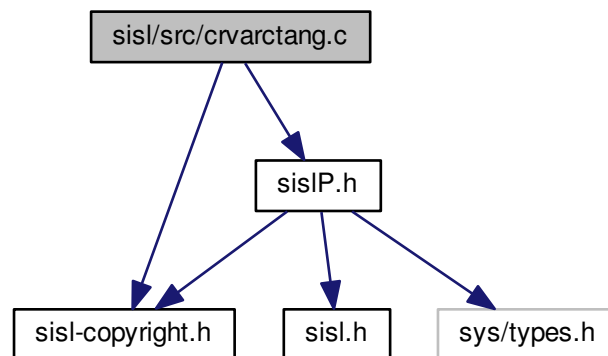

Definition at line 1053 of file construct.c.

## 30.2293 sisl/src/crvarctang.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for crvarctang.c:

### Macros

- `#define CRV_ARC_TANG`

### Functions

- `void crv_arc_tang (SISLCurve *pc1, center, double radius, double aepsge, guess_par, iter_par, int *jstat)`

## 30.2293.1 Macro Definition Documentation

30.2293.1.1 `#define CRV_ARC_TANG`

Definition at line 47 of file crvarctang.c.

## 30.2293.2 Function Documentation

30.2293.2.1 void `crv_arc_tang` ( `SISLCurve * pc1`, `center`, `double radius`, `double aepsge`, `guess_par`, `iter_par`, `int * jstat` )

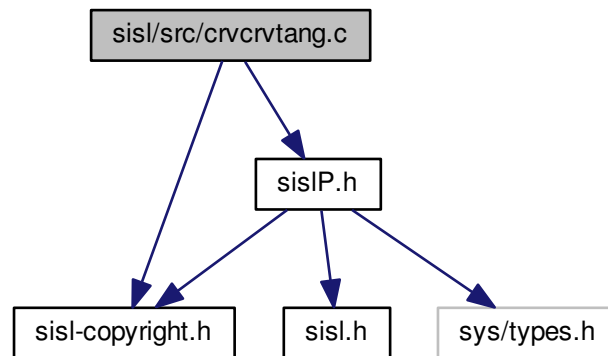

Definition at line 75 of file `crvarctang.c`.

## 30.2294 sisl/src/crvcrvtang.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for `crvcrvtang.c`:

### Macros

- `#define CRV_CRV_TANG`

### Functions

- void `crv_crv_tang` (`SISLCurve *pc1`, `SISLCurve *pc2`, `double aepsge`, `guess_par`, `iter_par`, `int *jstat`)

## 30.2294.1 Macro Definition Documentation

30.2294.1.1 `#define CRV_CRV_TANG`

Definition at line 47 of file `crvcrvtang.c`.

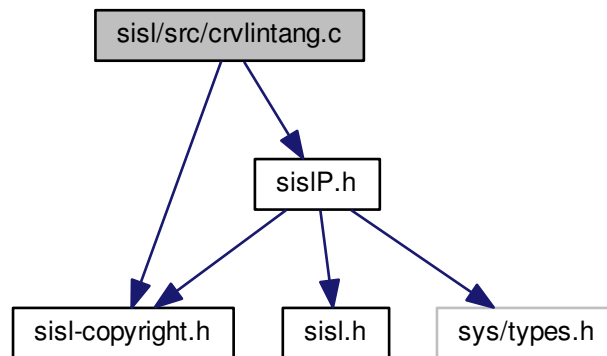

## 30.2294.2 Function Documentation

30.2294.2.1 `void crv_crv_tang ( SISLCurve * pc1, SISLCurve * pc2, double aeprge, guess_par , iter_par , int * jstat )`

Definition at line 74 of file crvcrtang.c.

## 30.2295 sisl/src/crvlintang.c File Reference

```
#include "sisl-copyright.h"
#include "sislP.h"
Include dependency graph for crvlintang.c:
```

### Macros

- `#define CRV_LIN_TANG`

### Functions

- `void crv_lin_tang (SISLCurve *pc1, point, normal, double ang_tol, double guess_par, double *iter_par, int *jstat)`

## 30.2295.1 Macro Definition Documentation

30.2295.1.1 `#define CRV_LIN_TANG`

Definition at line 49 of file crvlintang.c.

### 30.2295.2 Function Documentation

30.2295.2.1 void `crv_lin_tang` ( `SISLCurve * pc1`, `point`, `normal`, `double ang_tol`, `double guess_par`, `double * iter_par`, `int * jstat` )

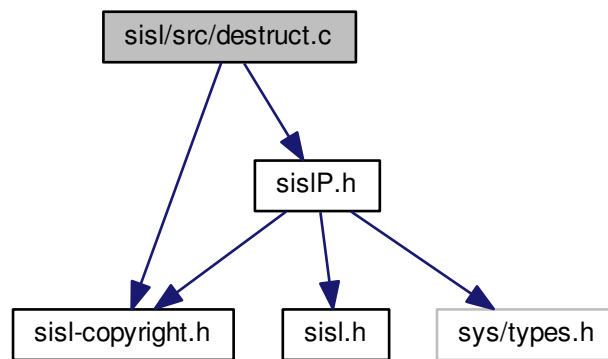

Definition at line 60 of file `crvlintang.c`.

### 30.2296 sisl/src/destruct.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for `destruct.c`:

#### Macros

- `#define DESTRUCT`

#### Functions

- void `freeCurve` (`SISLCurve * pcurve`)
- void `freeEdge` (`SISLEdge * pedge`)
- void `freeIntcrvlist` (`SISLIntcurve ** viclist`, `int icrv`)
- void `freeIntcurve` (`SISLIntcurve * pintc`)
- void `freeIntdat` (`SISLIntdat * pintdat`)
- void `freeIntlist` (`SISLIntlist * plist`)
- void `freeIntpt` (`SISLIntpt * ppt`)
- void `freeIntsurf` (`SISLIntsurf * intsurf`)
- void `freeTrimpar` (`SISLTrimpar * trimpar`)
- void `freeTrack` (`SISLTrack * ppt`)
- void `freeObject` (`SISLObject * pobj`)
- void `freePoint` (`SISLPoint * ppoint`)
- void `freePtedge` (`SISLPtedge * p1`)
- void `freeSurf` (`SISLSurf * psurf`)

## 30.2296.1 Macro Definition Documentation

### 30.2296.1.1 #define DESTRUCT

Definition at line 49 of file destruct.c.

## 30.2296.2 Function Documentation

### 30.2296.2.1 void freeCurve ( SISLCurve \* *pcurve* )

Definition at line 57 of file destruct.c.

### 30.2296.2.2 void freeEdge ( SISLEdge \* *pedge* )

Definition at line 151 of file destruct.c.

### 30.2296.2.3 void freeIntcrvlist ( SISLIntcurve \*\* *viclist*, int *icrv* )

Definition at line 224 of file destruct.c.

### 30.2296.2.4 void freeIntcurve ( SISLIntcurve \* *pintc* )

Definition at line 282 of file destruct.c.

### 30.2296.2.5 void freeIntdat ( SISLIntdat \* *pintdat* )

Definition at line 329 of file destruct.c.

### 30.2296.2.6 void freeIntlist ( SISLIntlist \* *plist* )

Definition at line 400 of file destruct.c.

### 30.2296.2.7 void freeIntpt ( SISLIntpt \* *ppt* )

Definition at line 445 of file destruct.c.

### 30.2296.2.8 void freeIntsurf ( SISLIntsurf \* *intsurf* )

Definition at line 503 of file destruct.c.

30.2296.2.9 void freeObject ( SISLObject \* *pobj* )

Definition at line 649 of file destruct.c.

#### 30.2339.2.1 void s1225 ( SISLCurve \* curve, int der, double parvalue, int \* leftknot, derive , curvature , double \* radius\_of\_curvature, int \* jstat )

Definition at line 59 of file s1225.c.

## 30.2340 sisl/src/s1226.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1226.c:

### Macros

- #define [S1226](#)

### Functions

- void [s1226](#) (SISLCurve \*curve, int der, double parvalue, int \*leftknot, derive, curvature, double \*radius\_of\_←\_curvature, int \*jstat)

### 30.2340.1 Macro Definition Documentation

#### 30.2340.1.1 #define S1226

Definition at line 49 of file s1226.c.

### 30.2340.2 Function Documentation

#### 30.2340.2.1 void s1226 ( SISLCurve \* curve, int der, double parvalue, int \* leftknot, derive , curvature , double \* radius\_of\_curvature, int \* jstat )

Definition at line 59 of file s1226.c.

## 30.2341 sisl/src/s1227.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1227.c:

### Macros

- #define [S1227](#)

### Functions

- void [s1227](#) (SISLCurve \*pc1, int ider, double ax, int \*ileft, eder, int \*jstat)

### 30.2341.1 Macro Definition Documentation

#### 30.2341.1.1 #define S1227

Definition at line 49 of file s1227.c.

### 30.2341.2 Function Documentation

#### 30.2341.2.1 void s1227 ( SISLCurve \* pc1, int iber, double ax, int \* ileft, iber, int \* jstat )

Definition at line 57 of file s1227.c.

## 30.2342 sisl/src/s1231.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1231.c:

### Macros

- #define [S1231](#)

### Functions

- void [s1231](#) (SISLCurve \*pc1, double apar, SISLCurve \*\*rcnew1, SISLCurve \*\*rcnew2, int \*jstat)

### 30.2342.1 Macro Definition Documentation

#### 30.2342.1.1 #define S1231

## 30.2420 sisl/src/s1370.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1370.c:

### Macros

- #define [S1370](#)

### Functions

- void [s1370](#) ([SISLCurve](#) \*pcurv, earray, int idim, int inarr, int ratflag, [SISLCurve](#) \*\*rcurv, int \*jstat)

### 30.2420.1 Macro Definition Documentation

#### 30.2420.1.1 #define S1370

Definition at line 49 of file s1370.c.

### 30.2420.2 Function Documentation

#### 30.2420.2.1 void s1370 ( SISLCurve \* pcurv, earray , int idim, int inarr, int ratflag, SISLCurve \*\* rcurv, int \* jstat )

Definition at line 59 of file s1370.c.

## 30.2421 sisl/src/s1371.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1371.c:

### Macros

- #define [S1371](#)

### Functions

- void [s1371](#) (SISLCurve \*pc1, ecentr, double aradiu, int idim, double aepsco, double aepsge, int \*jpt, double \*\*gpar, int \*jcrv, SISLIntcurve \*\*\*wcurve, int \*jstat)

### 30.2421.1 Macro Definition Documentation

#### 30.2421.1.1 #define S1371

Definition at line 49 of file s1371.c.

### 30.2421.2 Function Documentation

#### 30.2421.2.1 void s1371 ( SISLCurve \* pc1, ecentr, double aradiu, int idim, double aepsco, double aepsge, int \* jpt, double \*\* gpar, int \* jcrv, SISLIntcurve \*\*\* wcurve, int \* jstat )

Definition at line 58 of file s1371.c.

## 30.2422 sisl/src/s1372.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1372.c:

### Macros

- #define [S1372](#)

### Functions

- void [s1372](#) (SISLCurve \*pc1, epoint, edirec, double aradiu, int idim, double aepsco, double aepsge, int \*jpt, double \*\*gpar, int \*jcrv, SISLIntcurve \*\*\*wcurve, int \*jstat)

### 30.2422.1 Macro Definition Documentation

#### 30.2422.1.1 #define S1372

Definition at line 49 of file s1372.c.

### 30.2422.2 Function Documentation

#### 30.2422.2.1 void s1372 ( SISLCurve \* pc1, epoint, edirec, double aradiu, int idim, double aepsco, double aepsge, int \* jpt, double \*\* gpar, int \* jcrv, SISLIntcurve \*\*\* wcurve, int \* jstat )

Definition at line 58 of file s1372.c.

## 30.2423 sisl/src/s1373.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1373.c:

### Macros

- #define [S1373](#)

### Functions

- void [s1373](#) (SISLCurve \*pc1, etop, eaxis, econ, int idim, double aepsco, double aepsge, int \*jpt, double \*\*gpar, int \*jcrv, SISLIntcurve \*\*\*wcurve, int \*jstat)

### 30.2423.1 Macro Definition Documentation

#### 30.2423.1.1 #define S1373

Definition at line 49 of file s1373.c.

### 30.2423.2 Function Documentation

#### 30.2423.2.1 void s1373 ( SISLCurve \* pc1, etop, eaxis, econe, int idim, double aepsco, double aepsge, int \* jpt, double \*\* gpar, int \* jcrv, SISLIntcurve \*\*\* wcurve, int \* jstat )

Definition at line 58 of file s1373.c.

## 30.2424 sisl/src/s1374.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1374.c:

### Macros

- #define [S1374](#)

### Functions

- void [s1374](#) (SISLCurve \*pc1, earray, int idim, [double](#) aepsco, [double](#) aepsge, int \*jpt, [double](#) \*\*gpar, int \*jcrv, SISLIntcurve \*\*\*wcurve, int \*jstat)

### 30.2424.1 Macro Definition Documentation

#### 30.2424.1.1 #define S1374

Definition at line 49 of file s1374.c.

### 30.2424.2 Function Documentation

#### 30.2424.2.1 void s1374 ( SISLCurve \* pc1, earray , int idim, double aepsco, double aepsge, int \* jpt, double \*\* gpar, int \* jcrv, SISLIntcurve \*\*\* wcurve, int \* jstat )

Definition at line 57 of file s1374.c.

## 30.2425 sisl/src/s1375.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1375.c:

### Macros

- #define [S1375](#)

### Functions

- void [s1375](#) (SISLCurve \*pc1, ecentr, enorm, double abigr, double asmalr, int idim, double aepsco, double aepsge, int \*jpt, double \*\*gpar, int \*jcrv, SISLIntcurve \*\*\*wcurve, int \*jstat)

### 30.2425.1 Macro Definition Documentation

## 30.2446.1 Macro Definition Documentation

### 30.2446.1.1 #define S1422

Definition at line 49 of file s1422.c.

## 30.2446.2 Function Documentation

### 30.2446.2.1 void s1422 ( SISLSurf \*ps1, int ider, int iside1, int iside2, epar , int \*ilfs, int \*ilft, eder , enorm , int \*jstat )

Definition at line 58 of file s1422.c.

## 30.2447 sisl/src/s1424.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1424.c:

## Macros

- #define [S1424](#)

## Functions

- void [s1424](#) (SISLSurf \*ps1, int ider1, int ider2, epar, int \*ileft1, int \*ileft2, eder, int \*jstat)

### 30.2447.1 Macro Definition Documentation

#### 30.2447.1.1 #define S1424

Definition at line 49 of file s1424.c.

### 30.2447.2 Function Documentation

#### 30.2447.2.1 void s1424 ( SISLSurf \*ps1, int ider1, int ider2, epar , int \*ileft1, int \*ileft2, eder , int \*jstat )

Definition at line 58 of file s1424.c.

## 30.2448 sisl/src/s1425.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1425.c:

### Macros

- #define [S1425](#)

### Functions

- void [s1425](#) (SISLSurf \*ps1, int ider1, int ider2, int iside1, int iside2, epar, int \*ileft1, int \*ileft2, eder, int \*jstat)

## 30.2448.1 Macro Definition Documentation

### 30.2448.1.1 #define S1425

Definition at line 49 of file s1425.c.

## 30.2448.2 Function Documentation

### 30.2448.2.1 void s1425 ( SISLSurf \* ps1, int nder1, int nder2, int iside1, int iside2, epar , int \* ileft1, int \* ileft2, nder , int \* jstat )

Definition at line 58 of file s1425.c.

## 30.2449 sisl/src/s1435.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1435.c:

## Macros

- #define [S1435](#)

## Functions

- void [s1435](#) (SISLSurf \*ps1, int nder1, SISLCurve \*\*rledge, double \*cpar, int \*jstat)

## 30.2449.1 Macro Definition Documentation

### 30.2449.1.1 #define S1435

Definition at line 49 of file s1435.c.

## 30.2449.2 Function Documentation

### 30.2449.2.1 void s1435 ( SISLSurf \* ps1, int iedge, SISLCurve \*\* rcedge, double \* cpar, int \* jstat )

Definition at line 57 of file s1435.c.

## 30.2450 sisl/src/s1436.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1436.c:

## Macros

- #define [S1436](#)

## Functions

- void [s1436](#) (SISLSurf \*ps1, double apar, SISLCurve \*\*rcurve, int \*jstat)

## 30.2450.1 Macro Definition Documentation

### 30.2450.1.1 #define S1436

Definition at line 49 of file s1436.c.

## 30.2450.2 Function Documentation

### 30.2450.2.1 void s1436 ( SISLSurf \* ps1, double apar, SISLCurve \*\* rcurve, int \* jstat )

Definition at line 57 of file s1436.c.

## 30.2451 sisl/src/s1437.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1437.c:

## Macros

- #define [S1437](#)

## Functions

- void [s1437](#) (SISLSurf \*ps1, double apar, SISLCurve \*\*rcurve, int \*jstat)

### 30.2451.1 Macro Definition Documentation

#### 30.2451.1.1 #define S1437

Definition at line 49 of file s1437.c.

### 30.2451.2 Function Documentation

#### 30.2451.2.1 void s1437 ( SISLSurf \* ps1, double apar, SISLCurve \*\* rcurve, int \* jstat )

Definition at line 57 of file s1437.c.

## 30.2452 sisl/src/s1438.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1438.c:

### Macros

- #define [S1438](#)

### Functions

- void [s1438](#) (SISLCurve \*pc, int iedge, SISLPoint \*\*rpedge, double \*cpar, int \*jstat)

### 30.2452.1 Macro Definition Documentation

#### 30.2452.1.1 #define S1438

Definition at line 49 of file s1438.c.

### 30.2452.2 Function Documentation

#### 30.2452.2.1 void s1438 ( SISLCurve \* pc, int iedge, SISLPoint \*\* rpedge, double \* cpar, int \* jstat )

Definition at line 57 of file s1438.c.

## 30.2453 sisl/src/s1439.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1439.c:

### Macros

- #define [S1439](#)

### Functions

- void [s1439](#) (SISLSurf \*ps1, double apar, int idirec, SISLCurve \*\*rcurve, int \*jstat)

### 30.2453.1 Macro Definition Documentation

#### 30.2453.1.1 #define S1439

Definition at line 49 of file s1439.c.

### 30.2453.2 Function Documentation

#### 30.2453.2.1 void s1439 ( SISLSurf \* ps1, double apar, int idirec, SISLCurve \*\* rcurve, int \* jstat )

Definition at line 56 of file s1439.c.

## 30.2454 sisl/src/s1440.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1440.c:

### Macros

- #define [S1440](#)

### Functions

- void [s1440](#) (SISLSurf \*ps1, SISLSurf \*\*rs2, int \*jstat)

### 30.2454.1 Macro Definition Documentation

#### 30.2454.1.1 #define S1440

Definition at line 49 of file s1440.c.

### 30.2454.2 Function Documentation

#### 30.2454.2.1 void s1440 ( SISLSurf \* ps1, SISLSurf \*\* rs2, int \* jstat )

Definition at line 57 of file s1440.c.

## 30.2455 sisl/src/s1450.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1450.c:

### Macros

- #define [S1450](#)

### Functions

- void [s1450](#) (SISLSurf \*ps1, double aepsge, int \*jclos1, int \*jclos2, int \*jdgen1, int \*jdgen2, int \*jdgen3, int \*jdgen4, int \*jstat)

### 30.2455.1 Macro Definition Documentation

#### 30.2455.1.1 #define S1450

Definition at line 49 of file s1450.c.

### 30.2455.2 Function Documentation

#### 30.2455.2.1 void s1450 ( SISLSurf \* ps1, double aepsge, int \* jclos1, int \* jclos2, int \* jdgen1, int \* jdgen2, int \* jdgen3, int \* jdgen4, int \* jstat )

Definition at line 58 of file s1450.c.

## 30.2456 sisl/src/s1451.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1451.c:

### Macros

- #define [S1451](#)

### Functions

- void [s1451](#) (SISLCurve \*pc1, double aepsge, int \*jdgen, int \*jstat)

## 30.2456.1 Macro Definition Documentation

### 30.2456.1.1 #define S1451

Definition at line 49 of file s1451.c.

## 30.2456.2 Function Documentation

### 30.2456.2.1 void s1451 ( SISLCurve \* pc1, double aepsge, int \* jdgen, int \* jstat )

Definition at line 57 of file s1451.c.

## 30.2457 sisl/src/s1452.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1452.c:

## Macros

- #define [S1452](#)

## Functions

- void [s1452](#) (SISLSurf \*ps, double aepsge, double aoffset, SISLSurf \*\*rs, int \*jstat)

### 30.2457.1 Macro Definition Documentation

#### 30.2457.1.1 #define S1452

Definition at line 42 of file s1452.c.

### 30.2472.2 Function Documentation

#### 30.2472.2.1 void s1515 ( SISLSurf \* ps1, qpoint , bvec , int idim, double aepsco, double aepsge, double amax, SISLIntcurve \* pintcr, int icur, int igraph, int \* jstat )

Definition at line 59 of file s1515.c.

## 30.2473 sisl/src/s1516.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1516.c:

### Macros

- #define [S1516](#)

### Functions

- void [s1516](#) (ep, epar, int im, int idim, double \*\*ev, int \*jstat)

### 30.2473.1 Macro Definition Documentation

#### 30.2473.1.1 #define S1516

Definition at line 49 of file s1516.c.

### 30.2473.2 Function Documentation

#### 30.2473.2.1 void s1516 ( ep , epar , int im, int idim, double \*\* ev, int \* jstat )

Definition at line 57 of file s1516.c.

## 30.2474 sisl/src/s1517.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1517.c:

### Macros

- #define [S1517](#)

### Functions

- void [s1517](#) (ep, ev, epar, int im, double mu, double \*\*evnew, int \*jstat)

### 30.2474.1 Macro Definition Documentation

#### 30.2474.1.1 #define S1517

Definition at line 49 of file s1517.c.

### 30.2474.2 Function Documentation

#### 30.2474.2.1 void s1517 ( ep , ev , epar , int im, double mu, double \*\* evnew, int \* jstat )

Definition at line 57 of file s1517.c.

## 30.2475 sisl/src/s1518.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1518.c:

### Macros

- #define [S1518](#)

### Functions

- void [s1518](#) ([SISLSurf](#) \*surf, point, dir, [double epsge](#), start, end, parin, parout, int \*stat)

### 30.2475.1 Macro Definition Documentation

#### 30.2475.1.1 #define S1518

Definition at line 48 of file s1518.c.

### 30.2475.2 Function Documentation

#### 30.2475.2.1 void s1518 ( SISLSurf \* surf, point , dir , double epsge, start , end , parin , parout , int \* stat )

Definition at line 59 of file s1518.c.

## 30.2476 sisl/src/s1520.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1520.c:

### Macros

- #define [S1520](#)

### Functions

- void [s1520](#) (SISLCurve \*pc, double angle, ep, eaxis, SISLSurf \*\*rs, int \*jstat)

## 30.2476.1 Macro Definition Documentation

### 30.2476.1.1 #define S1520

Definition at line 49 of file s1520.c.

## 30.2476.2 Function Documentation

### 30.2476.2.1 void s1520 ( SISLCurve \* pc, double angle, ep, eaxis, SISLSurf \*\* rs, int \* jstat )

Definition at line 59 of file s1520.c.

## 30.2477 sisl/src/s1521.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1521.c:

## Macros

- #define [S1521](#)

## Functions

- [SISLCurve \\* s1521](#) (SISLCurve \*pc, int \*jstat)

## 30.2477.1 Macro Definition Documentation

### 30.2477.1.1 #define S1521

Definition at line 49 of file s1521.c.

## 30.2477.2 Function Documentation

### 30.2477.2.1 SISLCurve\* s1521 ( SISLCurve \* pc, int \* jstat )

Definition at line 57 of file s1521.c.

## 30.2478 sisl/src/s1522.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1522.c:

## Macros

- #define [S1522](#)

## Functions

- void [s1522](#) ([normal](#), centre, ellipaxis, [double](#) ratio, int [dim](#), [SISLCurve](#) \*\*ellipse, int \*jstat)

### 30.2478.1 Macro Definition Documentation

#### 30.2478.1.1 #define S1522

Definition at line 42 of file s1522.c.

### 30.2478.2 Function Documentation

#### 30.2478.2.1 void s1522 ( normal , centre , ellipaxis , double ratio, int dim, SISLCurve\*\* ellipse, int \* jstat )

Definition at line 50 of file s1522.c.

## 30.2479 sisl/src/s1528.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1528.c:

### Macros

- #define [S1528](#)

### Functions

- void [s1528](#) (int idim, int m1, int m2, points, int ipar, int iopen1, int iopen2, double \*\*par1, double \*\*par2, int \*jstat)

### 30.2479.1 Macro Definition Documentation

#### 30.2479.1.1 #define S1528

Definition at line 42 of file s1528.c.

### 30.2479.2 Function Documentation

#### 30.2479.2.1 void s1528 ( int *idim*, int *m1*, int *m2*, points , int *ipar*, int *iopen1*, int *iopen2*, double \*\* *par1*, double \*\* *par2*, int \* *jstat* )

Definition at line 50 of file s1528.c.

## 30.2480 sisl/src/s1529.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1529.c:

### Macros

- #define [S1529](#)

### Functions

- void [s1529](#) (ep, eder10, eder01, eder11, int im1, int im2, int idim, int ipar, [SISLSurf](#) \*\*rsurf, int \*jstat)

## 30.2480.1 Macro Definition Documentation

### 30.2480.1.1 #define S1529

Definition at line 42 of file s1529.c.

## 30.2480.2 Function Documentation

### 30.2480.2.1 void s1529 ( ep , eder10 , eder01 , eder11 , int im1, int im2, int idim, int ipar, SISLSurf \*\* rsurf, int \* jstat )

Definition at line 51 of file s1529.c.

## 30.2481 sisl/src/s1530.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1530.c:

## Macros

- #define [S1530](#)

## Functions

- void [s1530](#) (ep, eder10, eder01, eder11, epar1, epar2, int im1, int im2, int idim, [SISLSurf](#) \*\*rsurf, int \*jstat)

### 30.2481.1 Macro Definition Documentation

#### 30.2481.1.1 #define S1530

Definition at line 49 of file s1530.c.

### 30.2481.2 Function Documentation

#### 30.2481.2.1 void s1530 ( ep , eder10 , eder01 , eder11 , epar1 , epar2 , int im1 , int im2 , int idim , SISLSurf \*\* rsurf , int \* jstat )

Definition at line 59 of file s1530.c.

## 30.2482 sisl/src/s1531.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1531.c:

### Macros

- #define [S1531](#)

### Functions

- void [s1531](#) (ea, int idim, int in1, int in2, double \*\*eb, int \*jstat)

### 30.2482.1 Macro Definition Documentation

#### 30.2482.1.1 #define S1531

Definition at line 49 of file s1531.c.

### 30.2482.2 Function Documentation

#### 30.2482.2.1 void s1531 ( ea , int *idim*, int *in1*, int *in2*, double \*\* *eb*, int \* *jstat* )

Definition at line 56 of file s1531.c.

## 30.2483 sisl/src/s1534.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1534.c:

### Macros

- #define [S1534](#)

### Functions

## 30.2574 sisl/src/s1880.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1880.c:

### Macros

- #define [S1880](#)

### Functions

- void [s1880](#) (int ipar1, int ipar2, int \*jpt, [SISLIntpt](#) \*\*vpoint, int \*jlist, [SISLIntlist](#) \*\*vlist, int \*jpar, double \*\*gpar1, double \*\*gpar2, int \*jcrv, [SISLIntcurve](#) \*\*\*wcrv, int \*jstat)

### 30.2574.1 Macro Definition Documentation

#### 30.2574.1.1 #define S1880

Definition at line 49 of file s1880.c.

### 30.2574.2 Function Documentation

#### 30.2574.2.1 void s1880 ( int *ipar1*, int *ipar2*, int \* *jpt*, SISLIntpt \*\* *vpoint*, int \* *jlist*, SISLIntlist \*\* *vlist*, int \* *jpar*, double \*\* *gpar1*, double \*\* *gpar2*, int \* *jcrv*, SISLIntcurve \*\*\* *wcrv*, int \* *jstat* )

Definition at line 58 of file s1880.c.

## 30.2575 sisl/src/s1890.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1890.c:

### Macros

- #define [S1890](#)

### Functions

- void [s1890](#) (oknots, int oik, int oin, par, der, int \*jstat)

### 30.2575.1 Macro Definition Documentation

#### 30.2575.1.1 #define S1890

Definition at line 49 of file s1890.c.

### 30.2575.2 Function Documentation

#### 30.2575.2.1 void s1890 ( oknots , int oik, int oin, par , der , int \* jstat )

Definition at line 59 of file s1890.c.

## 30.2576 sisl/src/s1891.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1891.c:

### Macros

- #define [S1891](#)
- #define [MAX\\_SIZE](#) 50

### Functions

- void [s1891](#) (etau, epoint, int idim, int inbpt, int igrht, eder, int iopen, et, ebcoef, int \*in, int ik, int inlr, int incr, int \*jstat)

### 30.2576.1 Macro Definition Documentation

#### 30.2576.1.1 `#define MAX_SIZE 50`

Definition at line 52 of file s1891.c.

#### 30.2576.1.2 `#define S1891`

Definition at line 49 of file s1891.c.

### 30.2576.2 Function Documentation

#### 30.2576.2.1 `void s1891 ( etau , epoint , int idim , int inbpnt , int iright , eder , int iopen , et , ebcoef , int * in , int ik , int inlr , int inrc , int * jstat )`

Definition at line 63 of file s1891.c.

### 30.2577 sisl/src/s1893.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1893.c:

### Macros

- `#define S1893`

## Functions

- void [s1893](#) ([SISLCurve](#) \*orig, earray, int dimp1, int narr, int der1, int der2, [SISLCurve](#) \*\*ncurve, int \*jstat)

### 30.2577.1 Macro Definition Documentation

#### 30.2577.1.1 #define S1893

Definition at line 49 of file s1893.c.

### 30.2577.2 Function Documentation

#### 30.2577.2.1 void s1893 ( [SISLCurve](#) \* orig, earray , int dimp1, int narr, int der1, int der2, [SISLCurve](#) \*\* ncurve, int \* jstat )

Definition at line 60 of file s1893.c.

## 30.2578 sisl/src/s1894.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1894.c:

## Macros

- #define [S1894](#)

## Functions

- void [s1894](#) (oknots, int oik, int oin, int der1, int der2, earray, int dimp1, int narr, nknots, int \*nik, int \*nin, int \*jstat)

### 30.2578.1 Macro Definition Documentation

#### 30.2578.1.1 #define S1894

Definition at line 49 of file s1894.c.

### 30.2578.2 Function Documentation

#### 30.2578.2.1 void s1894 ( oknots , int oik, int oin, int der1, int der2, earray , int dimp1, int narr, nknots , int \* nik, int \* nin, int \* jstat )

Definition at line 59 of file s1894.c.

## 30.2579 sisl/src/s1896.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1896.c:

## Macros

- #define [S1896](#)

## Functions

- void [s1896](#) ([SISLSurf](#) \*osurf, earray, int dimp1, int narr, ders1, dert1, ders2, dert2, [SISLSurf](#) \*\*nsurf, int \*jstat)

### 30.2579.1 Macro Definition Documentation

#### 30.2579.1.1 #define S1896

Definition at line 49 of file s1896.c.

### 30.2579.2 Function Documentation

#### 30.2579.2.1 void s1896 ( [SISLSurf](#) \* *osurf*, earray , int *dimp1*, int *narr*, ders1 , dert1 , ders2 , dert2 , [SISLSurf](#) \*\* *nsurf*, int \* *jstat* )

Definition at line 60 of file s1896.c.

## 30.2580 sisl/src/s1897.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1897.c:

## Macros

- #define [S1897](#)
- #define [MAX\\_IK](#) 50

## Functions

- void `s1897` (`et`, `int ik`, `double ax`, `int left`, `int deriv`, `ebiatx`, `int *jstat`)

### 30.2580.1 Macro Definition Documentation

#### 30.2580.1.1 `#define MAX_IK 50`

Definition at line 53 of file `s1897.c`.

#### 30.2580.1.2 `#define S1897`

Definition at line 49 of file `s1897.c`.

### 30.2580.2 Function Documentation

#### 30.2580.2.1 `void s1897 ( et , int ik , double ax , int left , int deriv , ebiatx , int * jstat )`

Definition at line 61 of file `s1897.c`.

## 30.2581 `sisl/src/s1900.c` File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for `s1900.c`:

## Macros

- `#define S1900`

## Functions

- void `s1900` (`param`, `knots`, `econd`, `ntype`, `int inpt`, `int ik`, `int idim`, `int iopen`, `double *cendpar`, `SISLCurve **rcurve`, `double **gpar`, `int *jnbpar`, `int *jstat`)

### 30.2581.1 Macro Definition Documentation

#### 30.2581.1.1 `#define S1900`

Definition at line 49 of file `s1900.c`.

### 30.2581.2 Function Documentation

#### 30.2581.2.1 `void s1900 ( param , knots , econd , ntype , int inpt , int ik , int idim , int iopen , double * cendpar , SISLCurve ** rcurve , double ** gpar , int * jnbpar , int * jstat )`

Definition at line 61 of file `s1900.c`.

## 30.2582 sisl/src/s1901.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for `s1901.c`:

## Macros

- `#define S1901`

## Typedefs

- typedef void(\* [fparamProc](#)) ()
- typedef void(\* [fknotsProc](#)) ()

## Functions

- void [s1901](#) ([fparamProc](#) *fparam*, [fknotsProc](#) *fknots*, *econd*, *ntype*, *int inpt*, [double](#) *astpar*, *int ik*, *int idim*, *int iopen*, [double](#) \**cendpar*, [SISLCurve](#) \*\**rcurve*, [double](#) \*\**gpar*, *int \*jnbpar*, *int \*jstat*)

### 30.2582.1 Macro Definition Documentation

#### 30.2582.1.1 #define S1901

Definition at line 49 of file s1901.c.

### 30.2582.2 Typedef Documentation

#### 30.2582.2.1 typedef void(\* [fknotsProc](#)) ()

Definition at line 59 of file s1901.c.

#### 30.2582.2.2 typedef void(\* [fparamProc](#)) ()

Definition at line 58 of file s1901.c.

### 30.2582.3 Function Documentation

#### 30.2582.3.1 void [s1901](#) ( [fparamProc](#) *fparam*, [fknotsProc](#) *fknots*, *econd* , *ntype* , *int inpt*, [double](#) *astpar*, *int ik*, *int idim*, *int iopen*, [double](#) \* *cendpar*, [SISLCurve](#) \*\* *rcurve*, [double](#) \*\* *gpar*, *int \* jnbpar*, *int \* jstat* )

Definition at line 71 of file s1901.c.

## 30.2583 sisl/src/s1902.c File Reference

```
#include "sisl-copyright.h"
#include "sislP.h"
Include dependency graph for s1902.c:
```

### Macros

- `#define S1902`

### Functions

- `void s1902 (epar, int in, int ik, int cuopen, double **eknots, int *jstat)`

#### 30.2583.1 Macro Definition Documentation

##### 30.2583.1.1 `#define S1902`

Definition at line 49 of file `s1902.c`.

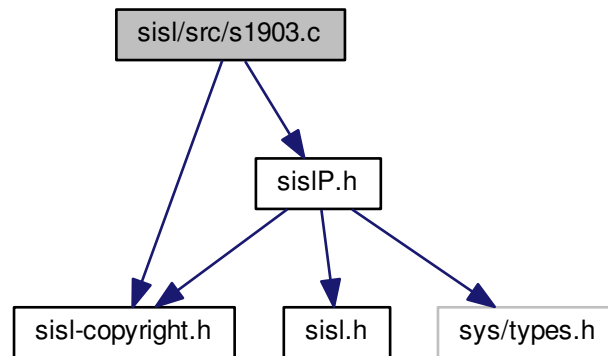

#### 30.2583.2 Function Documentation

##### 30.2583.2.1 `void s1902 (epar, int in, int ik, int cuopen, double **eknots, int *jstat)`

Definition at line 59 of file `s1902.c`.

## 30.2584 sisl/src/s1903.c File Reference

```
#include "sisl-copyright.h"
#include "sislP.h"
Include dependency graph for s1903.c:
```

### Macros

- `#define S1903`

### Functions

- `void s1903 (epar, int in, int ik, int cuopen, eknots, int *jstat)`

### 30.2584.1 Macro Definition Documentation

#### 30.2584.1.1 `#define S1903`

Definition at line 49 of file `s1903.c`.

### 30.2584.2 Function Documentation

#### 30.2584.2.1 `void s1903 (epar, int in, int ik, int cuopen, eknots, int *jstat)`

Definition at line 59 of file `s1903.c`.

## 30.2585 sisl/src/s1904.c File Reference

```
#include "sisl-copyright.h"
#include "sislP.h"
Include dependency graph for s1904.c:
```

### Macros

- `#define S1904`

### Functions

- `void s1904 (epar, int in, int ik, int cuopen, eknots, int *jstat)`

#### 30.2585.1 Macro Definition Documentation

##### 30.2585.1.1 `#define S1904`

Definition at line 49 of file `s1904.c`.

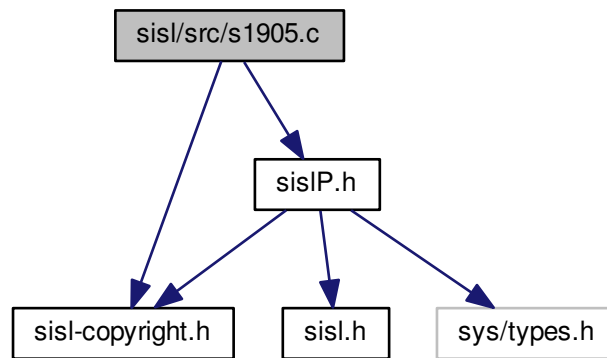

#### 30.2585.2 Function Documentation

##### 30.2585.2.1 `void s1904 (epar, int in, int ik, int cuopen, eknots, int *jstat)`

Definition at line 59 of file `s1904.c`.

## 30.2586 sisl/src/s1905.c File Reference

```
#include "sisl-copyright.h"
#include "sislP.h"
Include dependency graph for s1905.c:
```

### Macros

- `#define S1905`

### Functions

- void `s1905` ( `econd1`, `ntype1`, `int inpt1`, `int ik`, `int idim`, `int iopen`, `double **gcond2`, `int **mtype2`, `int *jnpt2`, `int *jstat` )

### 30.2586.1 Macro Definition Documentation

#### 30.2586.1.1 `#define S1905`

Definition at line 49 of file s1905.c.

### 30.2586.2 Function Documentation

#### 30.2586.2.1 void `s1905` ( `econd1`, `ntype1`, `int inpt1`, `int ik`, `int idim`, `int iopen`, `double **gcond2`, `int **mtype2`, `int *jnpt2`, `int *jstat` )

Definition at line 59 of file s1905.c.

## 30.2587 sisl/src/s1906.c File Reference

```
#include "sisl-copyright.h"

- `#define S1920`

#### Functions

- `void s1920 (SISLCurve *pc1, edir, int idim, double aepsco, double aepsge, int *jpt, double **gpar, int *jcrv, SISLIntcurve ***wcurve, int *jstat)`

### 30.2598.1 Macro Definition Documentation

30.2598.1.1 `#define S1920`

Definition at line 49 of file s1920.c.

## 30.2598.2 Function Documentation

30.2598.2.1 `void s1920 ( SISLCurve * pc1, edir , int idim, double aepsco, double aepsge, int * jpt, double ** gpar, int * jcrv, SISLIntcurve *** wcurve, int * jstat )`

Definition at line 58 of file s1920.c.

## 30.2599 sisl/src/s1921.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1921.c:

### Macros

- `#define S1921`

### Functions

- `void s1921 ( SISLSurf *ps1, edir, int idim, double aepsco, double aepsge, int *jpt, double **gpar, int *jcrv, SISLIntcurve ***wcurve, int *jstat)`

## 30.2599.1 Macro Definition Documentation

30.2599.1.1 `#define S1921`

Definition at line 49 of file s1921.c.

### 30.2599.2 Function Documentation

30.2599.2.1 void s1921 ( SISLSurf \* *ps1*, edir , int *idim*, double *aepsco*, double *aepsge*, int \* *jpt*, double \*\* *gpar*, int \* *jcrv*, SISLIntcurve \*\*\* *wcurve*, int \* *jstat* )

Definition at line 58 of file s1921.c.

### 30.2600 sisl/src/s1924.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1924.c:

#### Macros

- #define [S1924](#)

#### Functions

- void [s1924](#) (int id1, int id2, int id3, int id4, int in1, int in2, double \*\*ew, int \*jstat)

### 30.2600.1 Macro Definition Documentation

30.2600.1.1 #define S1924

Definition at line 49 of file s1924.c.

## 30.2600.2 Function Documentation

30.2600.2.1 void s1924 ( int *id1*, int *id2*, int *id3*, int *id4*, int *in1*, int *in2*, double \*\* *ew*, int \* *jstat* )

Definition at line 60 of file s1924.c.

## 30.2601 sisl/src/s1925.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1925.c:

### Macros

- #define [S1925](#)
- #define [s1925\\_MAX\\_ARRAY\\_SIZE](#) 50

### Functions

- void [s1925](#) (etau, epoint, int inbpnt, eder, et, ebcoef, int in, int ik, int irect, int [dim](#), ew1, int nur, ed, ew2, int inrc, ew3, int inlr, int \*jstat)

## 30.2601.1 Macro Definition Documentation

30.2601.1.1 #define [S1925](#)

Definition at line 49 of file s1925.c.

30.2601.1.2 `#define s1925_MAX_ARRAY_SIZE 50`

Definition at line 52 of file s1925.c.

### 30.2601.2 Function Documentation

30.2601.2.1 `void s1925 ( etau , epoint , int inbpnt , eder , et , ebcoef , int in , int ik , int irlight , int dim , ew1 , int nur , ed , ew2 , int inrc , ew3 , int inlr , int * jstat )`

Definition at line 62 of file s1925.c.

## 30.2602 sisl/src/s1926.c File Reference

```
#include "sisl-copyright.h"
```

```
#include "sislP.h"
```

Include dependency graph for s1926.c:

### Macros

- `#define S1926`

### Functions

- `void s1926 (double *w1, int nur, int ik, int *ed, double *w2, int nrc, double *w3, int nlr, int *jstat)`

### 30.2602.1 Macro Definition Documentation

30.2602.1.1 `#define S1926`

Definition at line 49 of file s1926.c.

## 30.2602.2 Function Documentation

30.2602.2.1 void s1926 ( double \* w1, int nur, int ik, int \* ed, double \* w2, int nrc, double \* w3, int nlr, int \* jstat )

Definition at line 60 of file s1926.c.

## 30.2603 sisl/src/s1927.c File Reference

```
#include "sisl-copyright.h"
```

```

#include "GoTools/Utils/config.h"
Include dependency graph for CurveOnVolume.h:
```

## Classes

- class [Go::CurveOnVolume](#)  
 A curve living on a parametric volume. It either has got information about the curve in geometry space and in the parameter domain of the volume or the ability to compute the other representation given one.

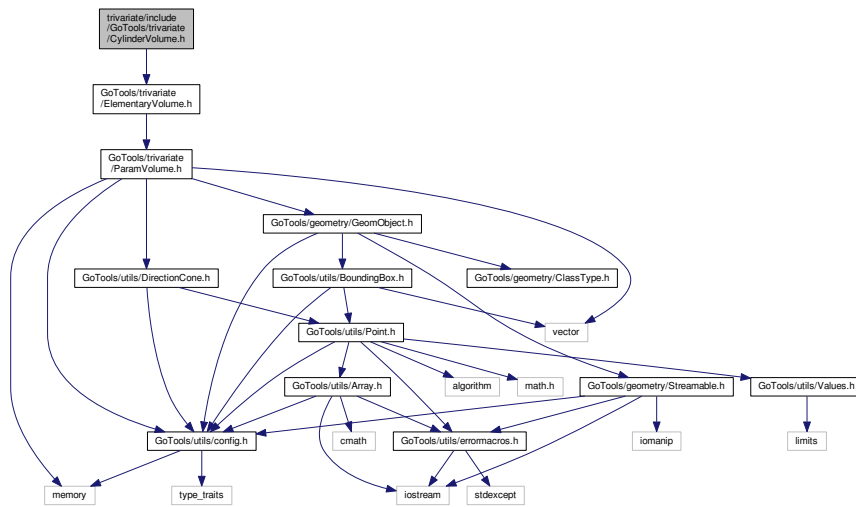

## Namespaces

- [Go](#)

# 30.2908 trivariate/include/GoTools/trivariate/CylinderVolume.h File Reference

```
#include "GoTools/trivariate/ElementaryVolume.h"
```

Include dependency graph for CylinderVolume.h:

## Classes

- class `Go::CylinderVolume`

Class that represents a solid cylinder, maybe with empty interior like a straight tube. It is a subclass of [ElementaryVolume](#), and has a natural parametrization in terms of a radius  $u$ , an angle  $v$ , and distance  $w$ :  $\mathbf{p}(u, v, w) = \mathbf{C} + u(\cos(v)\mathbf{x} + \sin(v)\mathbf{y}) + w\mathbf{z}$ , where  $\mathbf{C}$  is a position vector, and  $\mathbf{x}$ ,  $\mathbf{y}$  and  $\mathbf{z}$  are the (local) axes. The parametrization is bounded by:  $R \leq u \leq S$ ,  $0 \leq v \leq 2\pi$ ,  $-\infty < w < \infty$ , where  $R$  and  $S$  are the inner and outer radius. The dimension is 3.

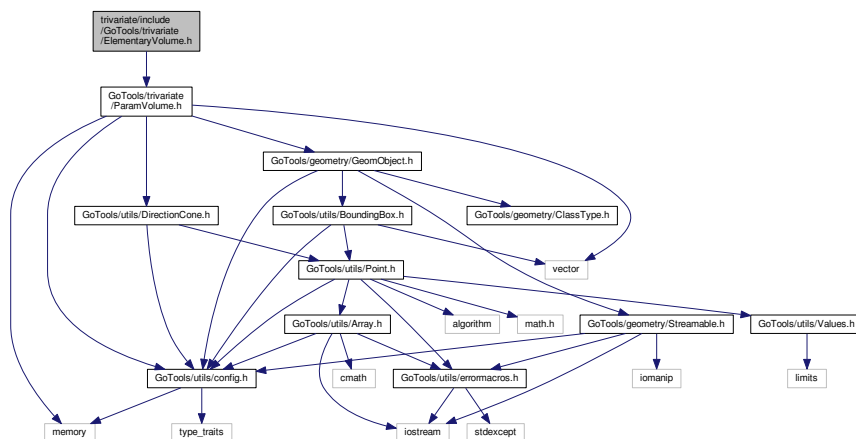

## Namespaces

## Chapter 31

# Example Documentation

### 31.1 adapt\_curve

adapt\_curve.C

This program demonstrates the use of the class `AdaptCurve`. The class can generate a B-spline curve that approximates an evaluator based curve to satisfy a given accuracy.

The program reads a 2D parameter curve and a surface from file, and lifts the curve onto the surface to make an evaluator based curve. This evaluator based curve are then used as input to the `AdaptCurve` constructor.

### 31.2 append\_curve

append\_curve.C

This program demonstrates the use of the function `SplineCurve::append_curve` declared in `SplineCurve.h`. The function joins two `SplineCurves` by appending the start of the second curve to the end of the first curve. The two curves must be of the same type

### 31.3 approx\_curve

approx\_curve.C

This program demonstrates the use of the class `ApproxCurve`. The class can generate a B-spline curve that approximates a set of parametrized points for a given accuracy by inserting new knots in the curve until the required accuracy is reached.

## 31.4 approx\_surface

approx\_surface.C

This program demonstrates the use of the class ApproxSurf. The class can generate a new tensor product B-spline surface with four boundary curves that approximates a set of parametrized points for a given accuracy, or modify an old surface by a set of parametrized points.

## 31.5 BrepToTrivariate

BrepToTrivariate.C

The idea of this program is to read a Brep model in g2-format and create trivariate spline model. Note that the functionality works only for some classes of Brep models.

## 31.6 circle

circle.C

This program demonstrates the use of the class Circle. It is a subclass of ElementaryCurve. The space dimension of a circle is either 2 or 3. The default parametrization is an angle from 0 to  $2\pi$ .

## 31.7 closestpoint\_curve

closestpoint\_curve.C

This program demonstrates the use of the two functions `ParamCurve::closestPoint(const Point& pt, double& clo_t, Point& clo_pt, double& clo_dist)` and `SplineCurve::closestPoint(const Point& pt, double tmin, double tmax, double& clo_t, Point& clo_pt, double& clo_dist, double const *seed = 0)`. They compute the closest point on a curve from a specified point.

## 31.8 closestpoint\_degenerate\_sf

closestpoint\_degenerate\_sf.C

This program demonstrates the use of the function `SplineSurface::closestPoint(const Point& pt, double& clo_u, double& clo_v, Point& clo_pt, double& clo_dist, double epsilon, const RectDomain* domain_of_interest = NULL, double *seed = 0)`. The declaration of the function is in 'ParamSurface.h'. The function compute the closest point on a surface from a specified point. It reads a spline surface file in Go-format and a file in plain ASCII format with the xyz-coordinates of the points we want to find the closest point on the surface to.

## 31.9 closestpoint\_surface

closestpoint\_surface.C

This program demonstrates the use of the function `'SplineSurface::closestPoint(const Point& pt, double& clo_u, double& clo_v, Point& clo_pt, double& clo_dist, double epsilon, const RectDomain* domain_of_interest = NULL, double *seed = 0)'`. The declaration of the function is in 'ParamSurface.h'. The function compute the closest point on a surface from a specified point. It reads a spline surface file in Go-format and a file in plain ASCII format with the xyz-coordinates of the points we want to find the closest point on the surface to.

## 31.10 cone

cone.C

This program demonstrates the use of the class `Cone`. It is a subclass of `ElementarySurface`. The space dimension of a cone is 3. The default parametrization is the angle  $u$  from 0 to  $2\pi$  and the distance  $v$  from minus infinity to plus infinity.

## 31.11 const\_param\_curves

const\_param\_curves.C

The program demonstrates the use of the function `SplineSurface::constParamCurve(double parameter, bool padir_is_u)`. The declaration of the function is in `SplineSurface.h`.

## 31.12 coons\_patch\_gen

coons\_patch\_gen.C

This program demonstrates the use of some of the functions in namespace `CoonsPatchGen`. The functions can be used to create a Coons Patch or a Gordon Surface. The functions returns a `SplineSurface` pointer to the created surface.

## 31.13 coons\_patch\_volume\_gen

coons\_patch\_volume\_gen.C

This program demonstrates the use of the static function `createCoonsPatch` in namespace `CoonsPatchVolumeGen`. The function can create a new `SplineVolume` representing the coons patch of six `SplineSurfaces`, the six faces of the volume.

## 31.14 createBlockStructuredDisc

createBlockStructuredDisc.C

This example file creates a block structured set of spline surfaces from a face set consisting of possibly trimmed surfaces with arbitrary topology (no corner-to-corner conditions).

## 31.15 createCoonsVolume

createCoonsVolume.C

The program creates a Coons volume and performs smoothing of this volume keeping the boundary surfaces fixed.

## 31.16 createLinSweptVol

createLinSweptVol.C

Create a block structured volume model from a face set describing a boundary represented solid that may be created by sweeping a planar face set along a stright line

## 31.17 createMidShip

createMidShip.C

Build a volume model representing a simplified mid ship, hull with stiffeneres in both directions and deck. The model is represented as a block structured volume model.

## 31.18 createRotationalVol

createRotationalVol.C

Create a block structured volume model from a face set describing a boundary represented solid representing a rotational object.

## 31.19 createSplitDisc

createSplitDisc.C

This programs creates a face set representing a disc as two trimmed surfaces: The trimmed disc and a rectangular surface lying inside this disc. This is a starting point for the creation of a disc as a multi patch model with spline surfaces and no degeneracies. The construction uses planar, rectangular surfaces and a truncated sylinder, but the operations performed using these surfaces, do not depend on that level of regularity.

## 31.20 createVolumeBlocks

createVolumeBlocks.C

Create a block structured volume model from a face set consisting of possibly trimmed surfaces with arbitrary topology (no corner-to-corner conditions). The face set represents a boundary represented solid and is described in a g2-file.

## 31.21 createVolumeBoundaries

createVolumeBoundaries.C

This programs creates a set of B-spline surfaces intended as the boundary surfaces for a spline volume. A number of different methods are used in the surface construction. Thus, this example program illustrates some of the possibilities for surface construction.

## 31.22 cylinder

cylinder.C

This program demonstrates the use of the class Cylinder. It is a subclass of ElementarySurface. The space dimension of a cylinder is 3. The default parametrization is the angle  $u$  from 0 to  $2\pi$  and the distance  $v$  from minus infinity to plus infinity.

## 31.23 ellipse

ellipse.C

This program demonstrates the use of the class Ellipse. It is a subclass of ElementaryCurve. The space dimension of an ellipse is either 2 or 3. The default parametrization is an angle from 0 to  $2\pi$ .

## 31.24 face2splineset

face2splineSet.C

This program demonstrates how to create a set of spline surfaces, meeting in a corner-to-corner configuration and with corresponding coefficients at common boundaries, from one possibly trimmed face / The program reads a bounded surface from a file, splits this surface into several bounded surfaces where each surface has (at most) 4 boundary curves. Finally, each bounded surface is approximated by a spline surface within a given tolerance and C0 continuities at common boundaries is ensured.

## 31.25 interpol\_curve\_free

interpol\_curve\_free.C

This program reads a point data set from a file, interpolates a spline curve through the points and writes an output file with the spline curve and the input points.

## 31.26 interpol\_curve\_hermite

interpol\_curve\_hermite.C

This program reads a point data set from a file, interpolates a spline curve through the points and write two output files: One file with spline curve data and one file with tangent vectors from the input points.

## 31.27 linear\_swept\_surface

linear\_swept\_surface.C

This program demonstrates the use of the static function 'linearSweptSurface' in the class 'SweepSurfaceCreator'. The function can generate a B-spline surface by sweeping one curve along another. A given point on the sweeping curve will be swept along the other curve.

### 31.28 linear\_swept\_volume

linear\_swept\_volume.C

This program demonstrates the use of the static function *linearSweptVolume* in the class *SweepVolumeCreator*. The function can generate a *SplineVolume* by sweeping a surface along a curve or sweeping a curve along a surface. A sweeping point on the curve or the surface must be specified. If the point lies on the the surface, the surface will be swept along the curve. If the point lies on the the curve, the curve will be swept along the surface. The curve and the surface must be such that it doesn't lead to self-intersection.

### 31.29 linearBrepToTrivariate

linearBrepToTrivariate.C

The idea of this program is to read a Brep model in g2-format and check if it can be regenerated as a linear sweep. In that case a multi block trivariate spline model will be created.

### 31.30 loft\_volume\_creator

loft\_volume\_creator.C

This program demonstrates the use of a static function *loftVolume* in namespace *LoftVolumeCreator*. The function use lofting to create a new *SplineVolume* based on a set of surfaces. The surfaces are not changed during the lofting process. The surfaces must lie in the same space.

### 31.31 mirrorAndLoft

example\_mirrorAndLoft.C

This program demonstrates how to create a volume model from a set of spline surfaces. The surfaces must be connected. The surface set is mirrored around a given plane, and lofting between corresponding surfaces is performed.

## 31.32 multiPatchSweep

multiPatchSweep.C

The idea of this program is to sweep a set surfaces to create a multi patch volume model. The surface set will be created by the example programs in compositemodel: createSplitDisc and createBlockStructuredDisc

## 31.33 project\_curve

project\_curve.C

This program demonstrates the use of the function `void CurveCreators::projectCurve(shared_ptr<ParamCurve>& space_cv, shared_ptr<ParamSurface>& surf, double epsge, shared_ptr<SplineCurve>& proj_cv, shared_ptr<SplineCurve>& par_cv)`

The function generates a cubic spline curve(order four) which lies on a given SplineSurface and is the projection of a given space curve (in 3D space) onto that surface, within a given tolerance. The given space curve should be close to the surface.

## 31.34 rotational\_swept\_surface

rotational\_swept\_surface.C

This program demonstrates the use of the static function *rotationalSweptSurface* in the class *SweepSurfaceCreator*. The function can generate a B-spline surface by rotating a curve around an axis.

## 31.35 rotational\_swept\_volume

rotational\_swept\_volume.C

This program demonstrates the use of the static function *rotationalSweptVolume* in the class *SweepVolumeCreator*. The function can generate a SplineVolume by rotating a surface around an axis. The surface must be such that it doesn't lead to self-intersection.

### 31.36 sphere

sphere.C

This program demonstrates the use of the class Sphere. It is a subclass of ElementarySurface. The space dimension of a sphere is 3. The default parametrization is the angles  $u$  from 0 to  $2\pi$  and  $v$  from  $-\pi/2$  to  $+\pi/2$ .

### 31.37 surface\_of\_revolution

surface\_of\_revolution.C

This program demonstrates the use of the class SurfaceOfRevolution. SurfaceOfRevolution is swept out by a SplineCurve that is rotated around an axis with a complete revolution, and is thereby a parametric surface. The space dimension is 3. The curve must be such that it doesn't lead to a self-intersecting surface.

### 31.38 torus

torus.C

This program demonstrates the use of the class Torus. It is a subclass of ElementarySurface. The space dimension of a torus is 3. The default parametrization is the angles  $u$  along the major circle and  $v$  along the minor circle from 0 to  $2\pi$ .
